Introduction

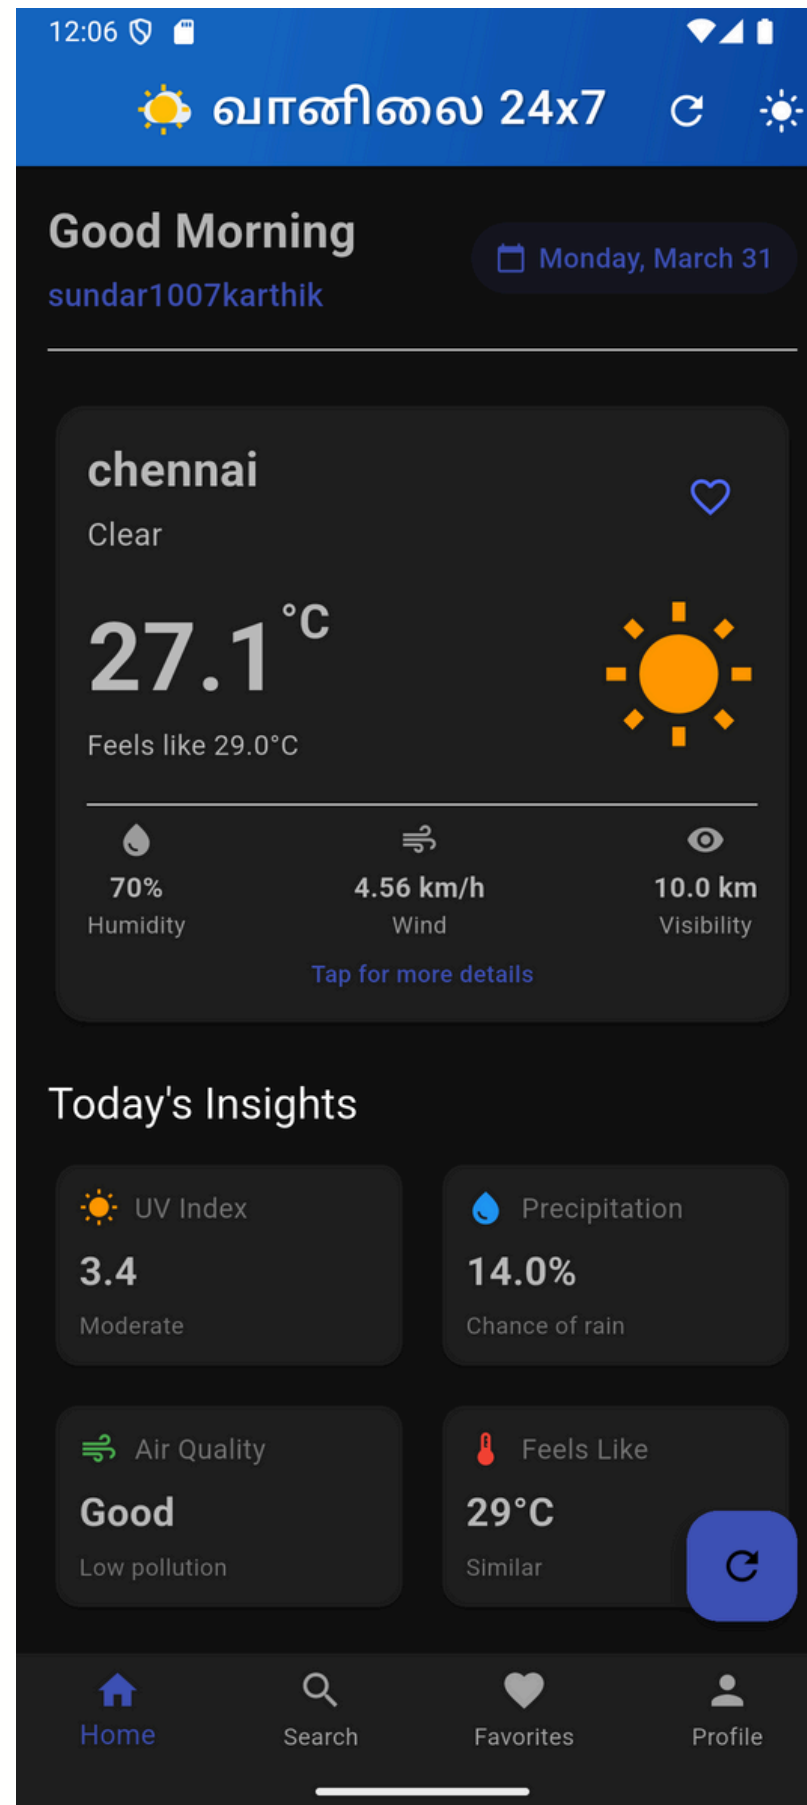

வானிலை 24x7

Purpose

- Real-time weather information
- Forecasting with personalized user experience

Target Audience

- Weather enthusiasts,
- Daily commuters, Travelers
- Individuals planning outdoor activities or events.

User Experience

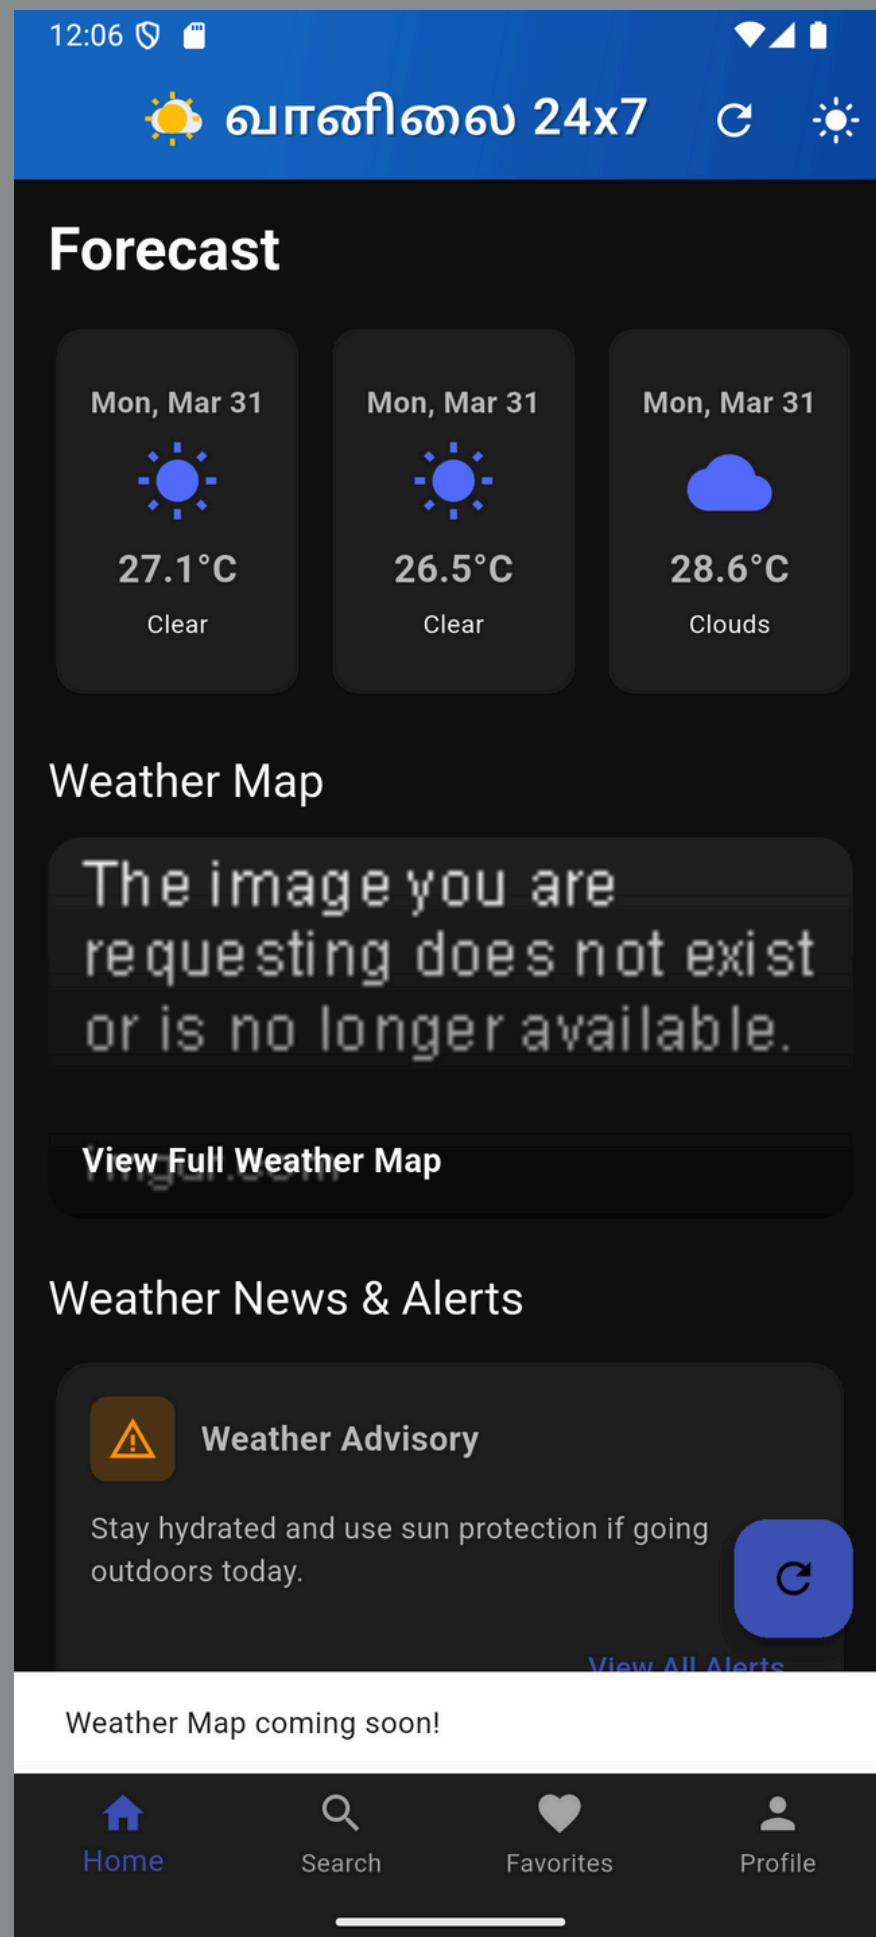

An intuitive and clean user interface with dark and light theme options, which can be stored in local storage for guest users and in Firestore DB for signed-in users.

Dashboard

Displays real-time weather based on the user's location by utilizing geolocation to fetch the current coordinates.

Users & Accounts

Allows users to explore the app using a guest account and check out its features before signing in.

வானிலை 24X7

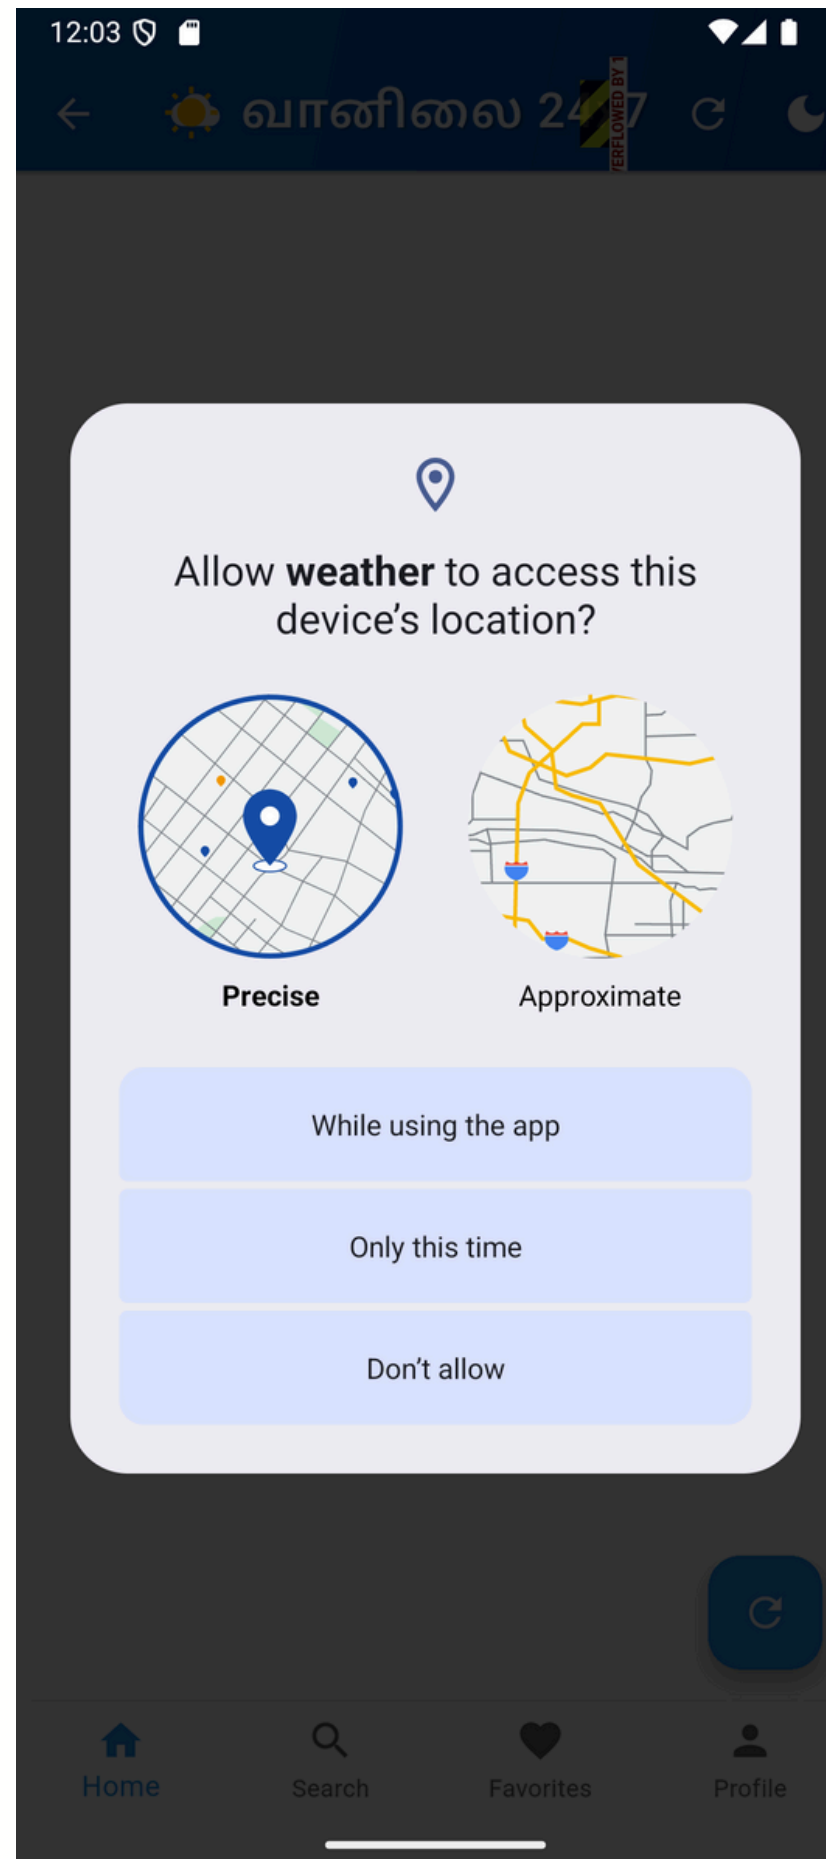

Key Features

Key Features

வானிலை 24x7

Core Functionality

- Real-time weather data with accurate forecasts.
- Location-based weather information using GPS.
- Detailed weather reports for specific cities.
- Hourly and 5-day forecasts with weather trends.
- Weather insights, including:
Temperature, Humidity, Wind Speed, Feels Like Temperature, Air Quality Index (AQI), Precipitation Levels,
- Option to save favorite locations for quick access.

● Technical Innovations

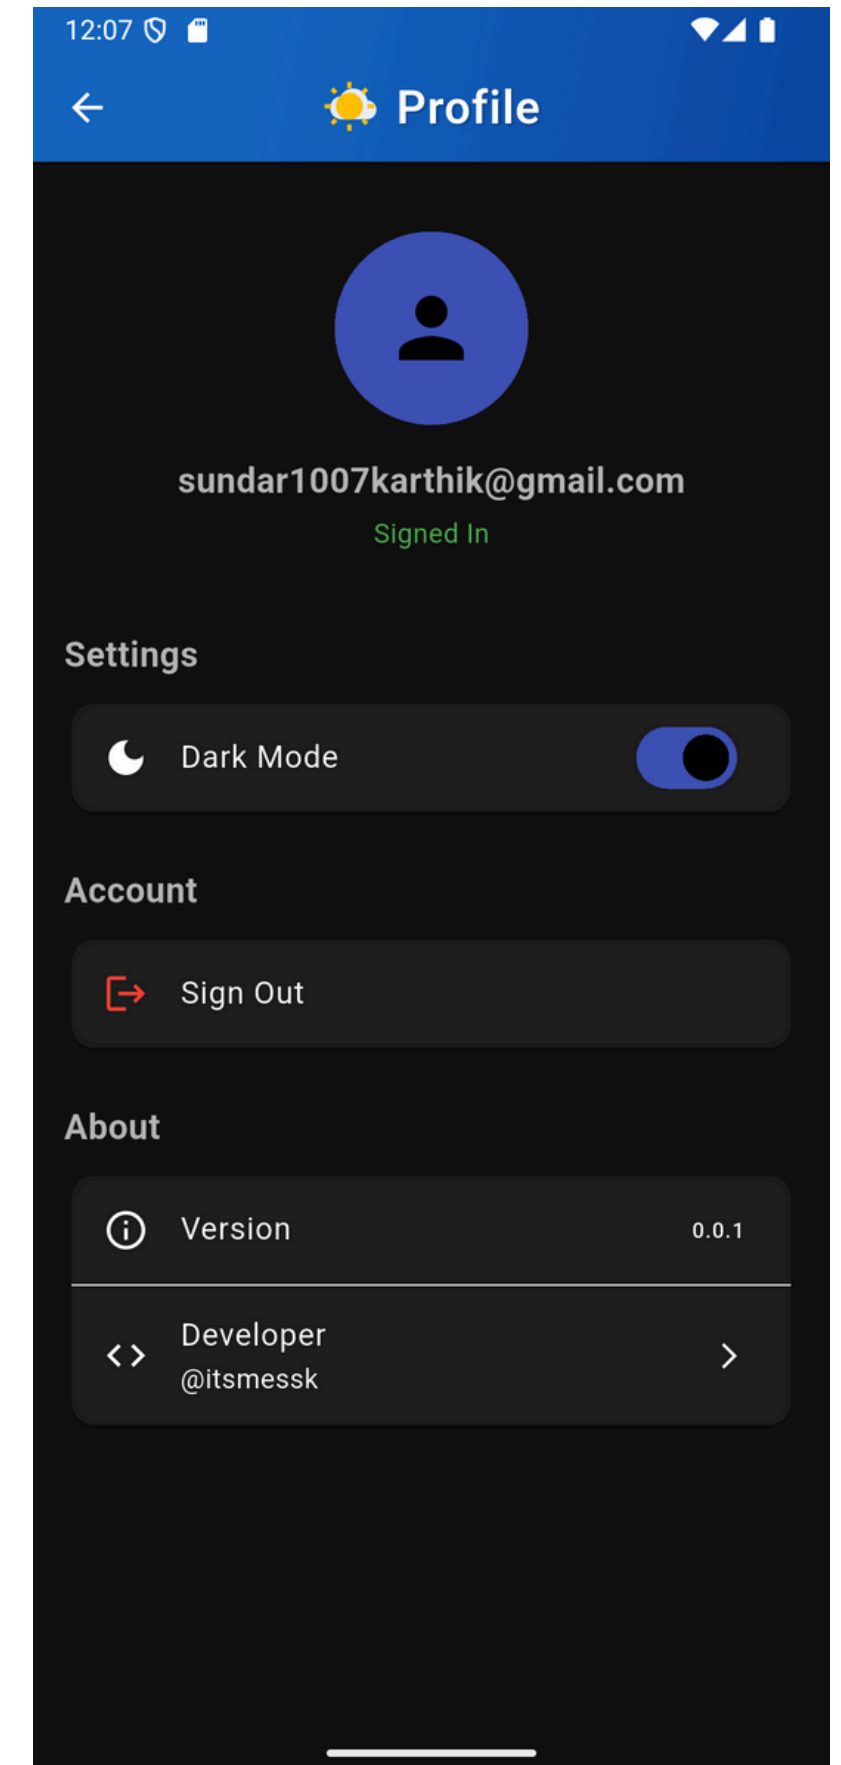

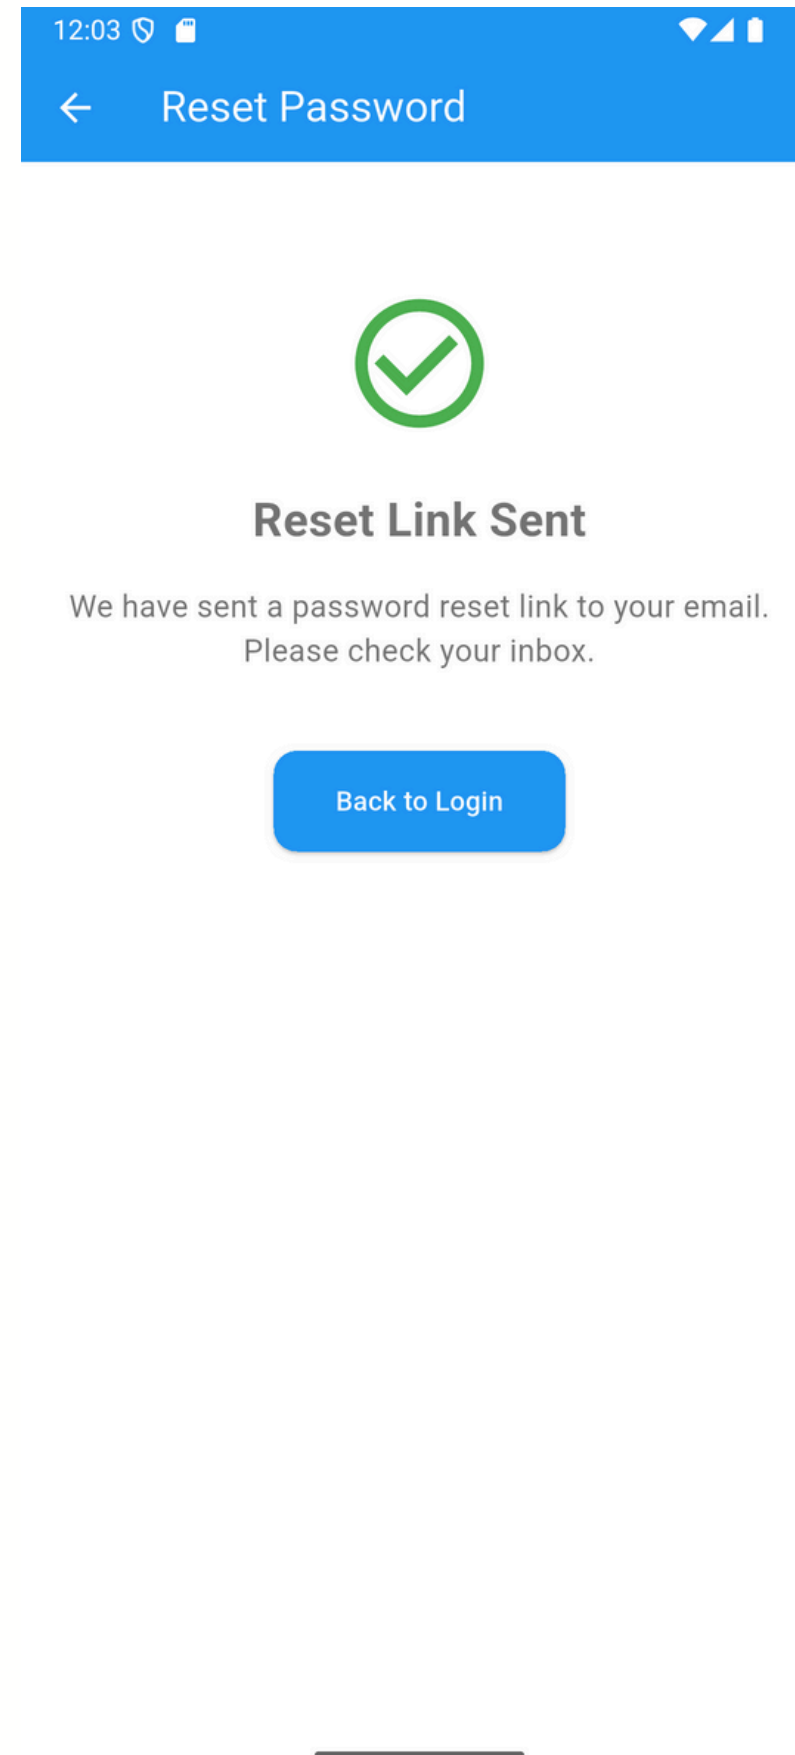

- Firebase Integration:
 - User authentication and account management.
 - Cloud-based preferences stored securely.
 - Real-time data syncing across multiple devices.
- Real-time Data Updates:
 - Instant weather updates from a trusted weather API.
 - Automatic refresh mechanism to keep data updated.
- Offline Support:
 - Caching weather data for offline viewing.
 - Essential data stored locally to maintain functionality without internet access.

வாநிலை 24X7

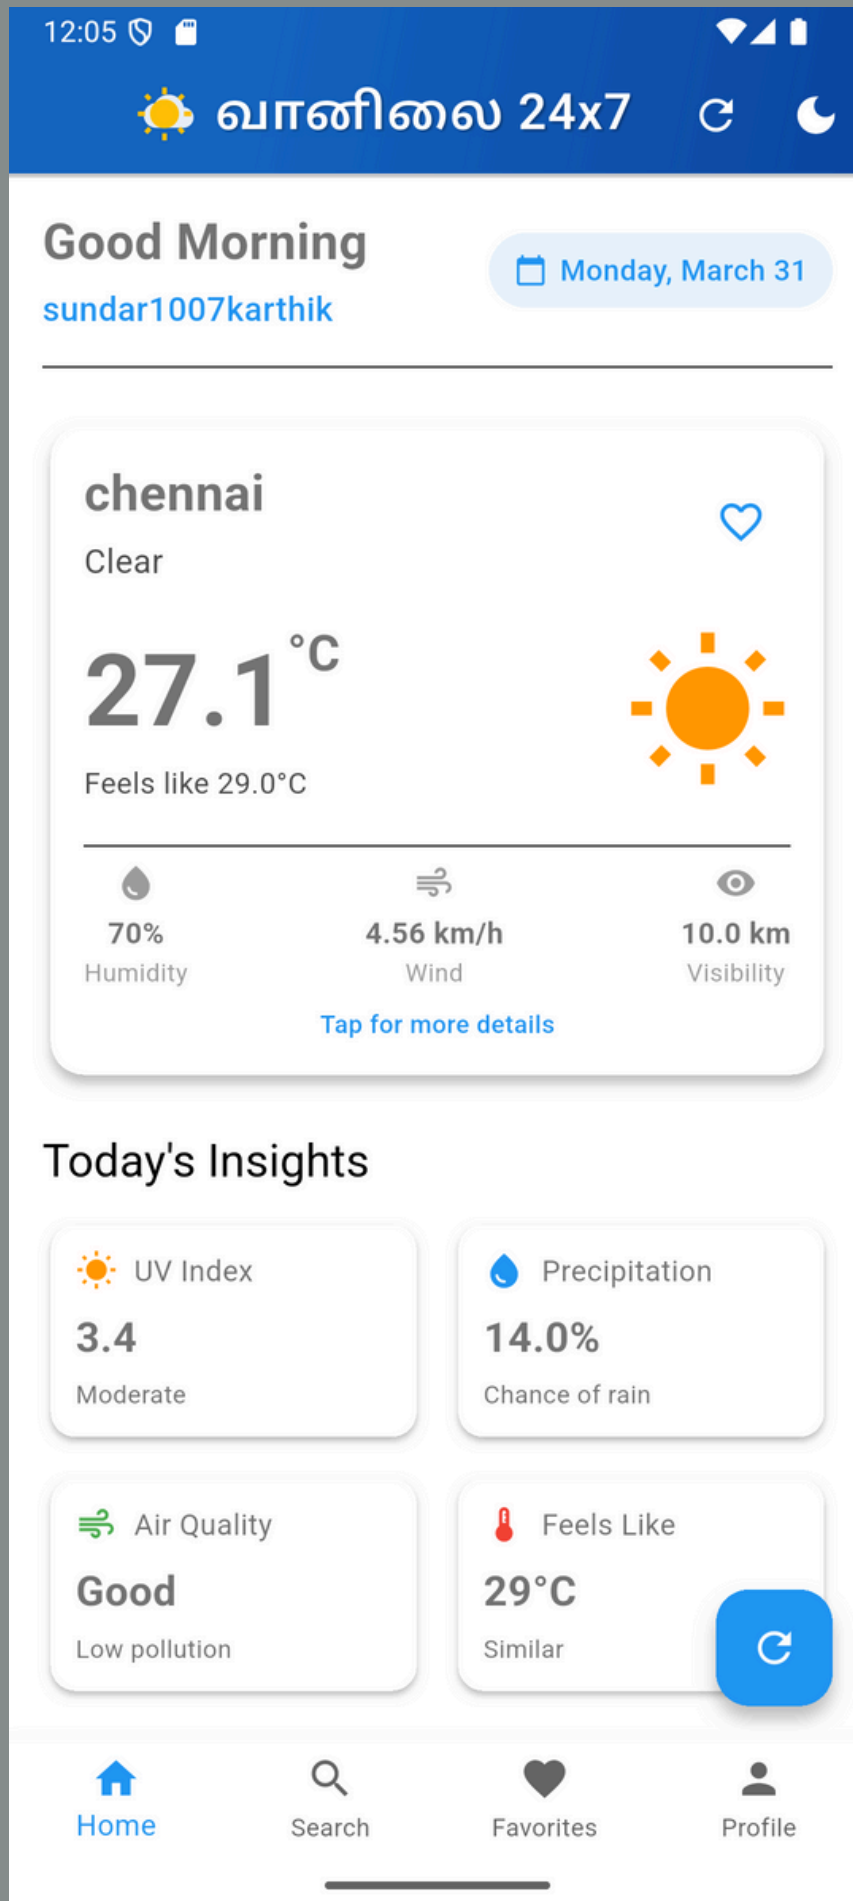

Key Features

● User Experience

- Intuitive and clean user interface.
- Dark and light theme options, stored in:
- Local storage for guest users.
- Firestore DB for signed-in users.
- Allows users to explore the app with a guest account to check out its features before signing in.
- Password reset feature for secure account recovery.
- Flexible unit settings for:
 - Temperature (°C/°F)
 - Wind speed (km/h or mph)
- Responsive layout that adapts seamlessly across different devices.
- Quick access to relevant information with minimal taps.

App Screens and Functionality

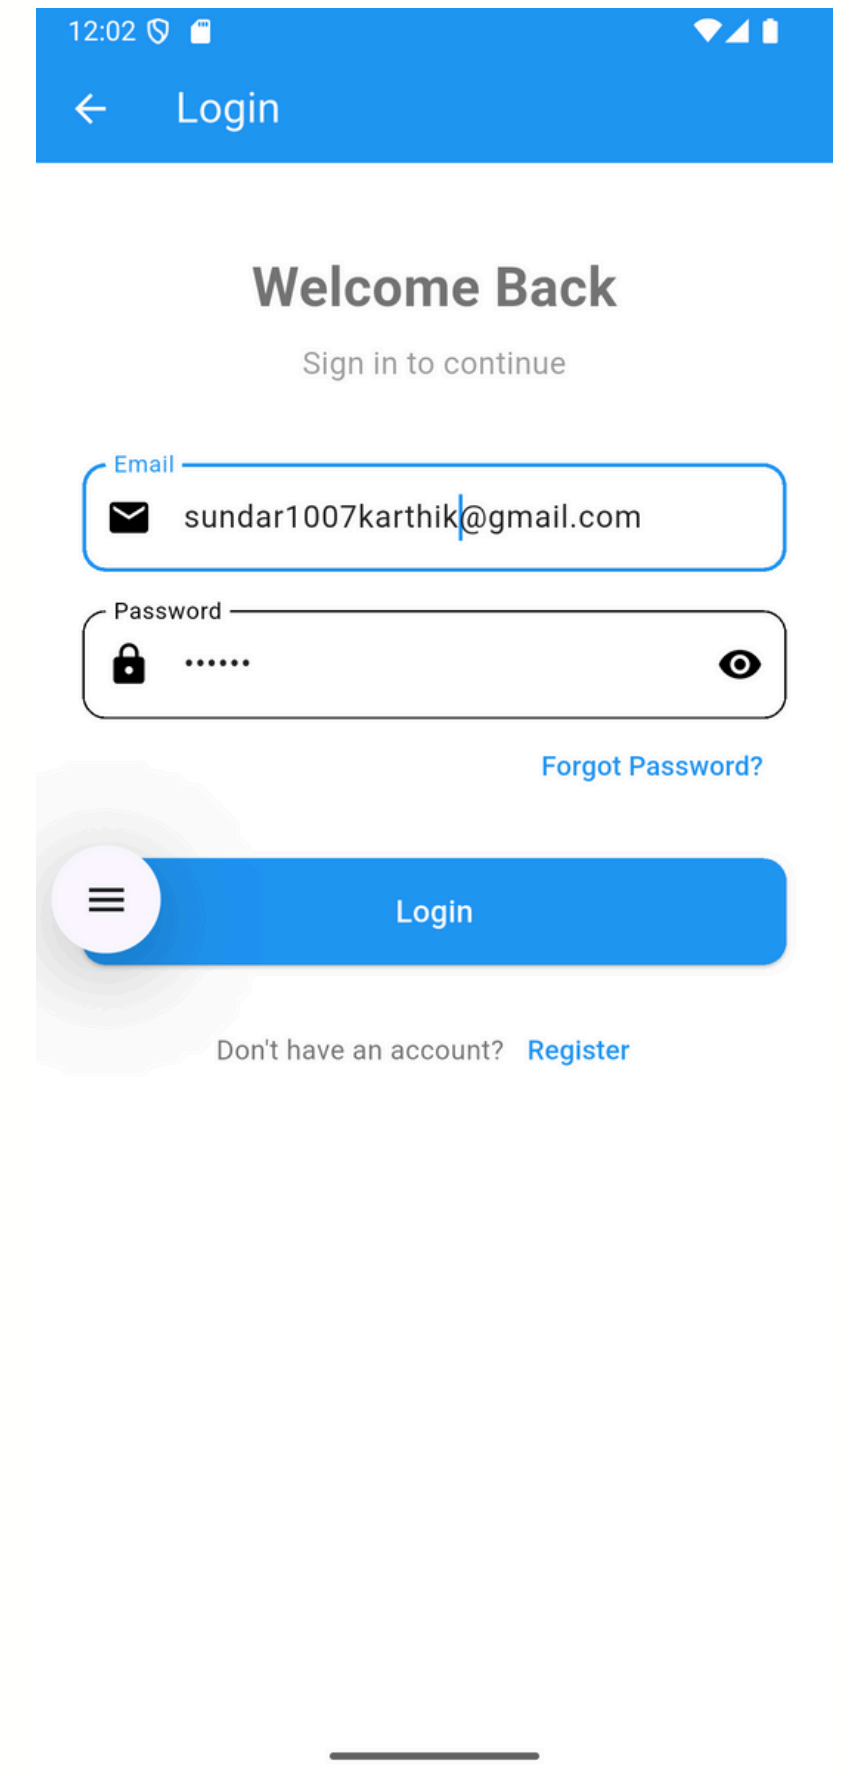

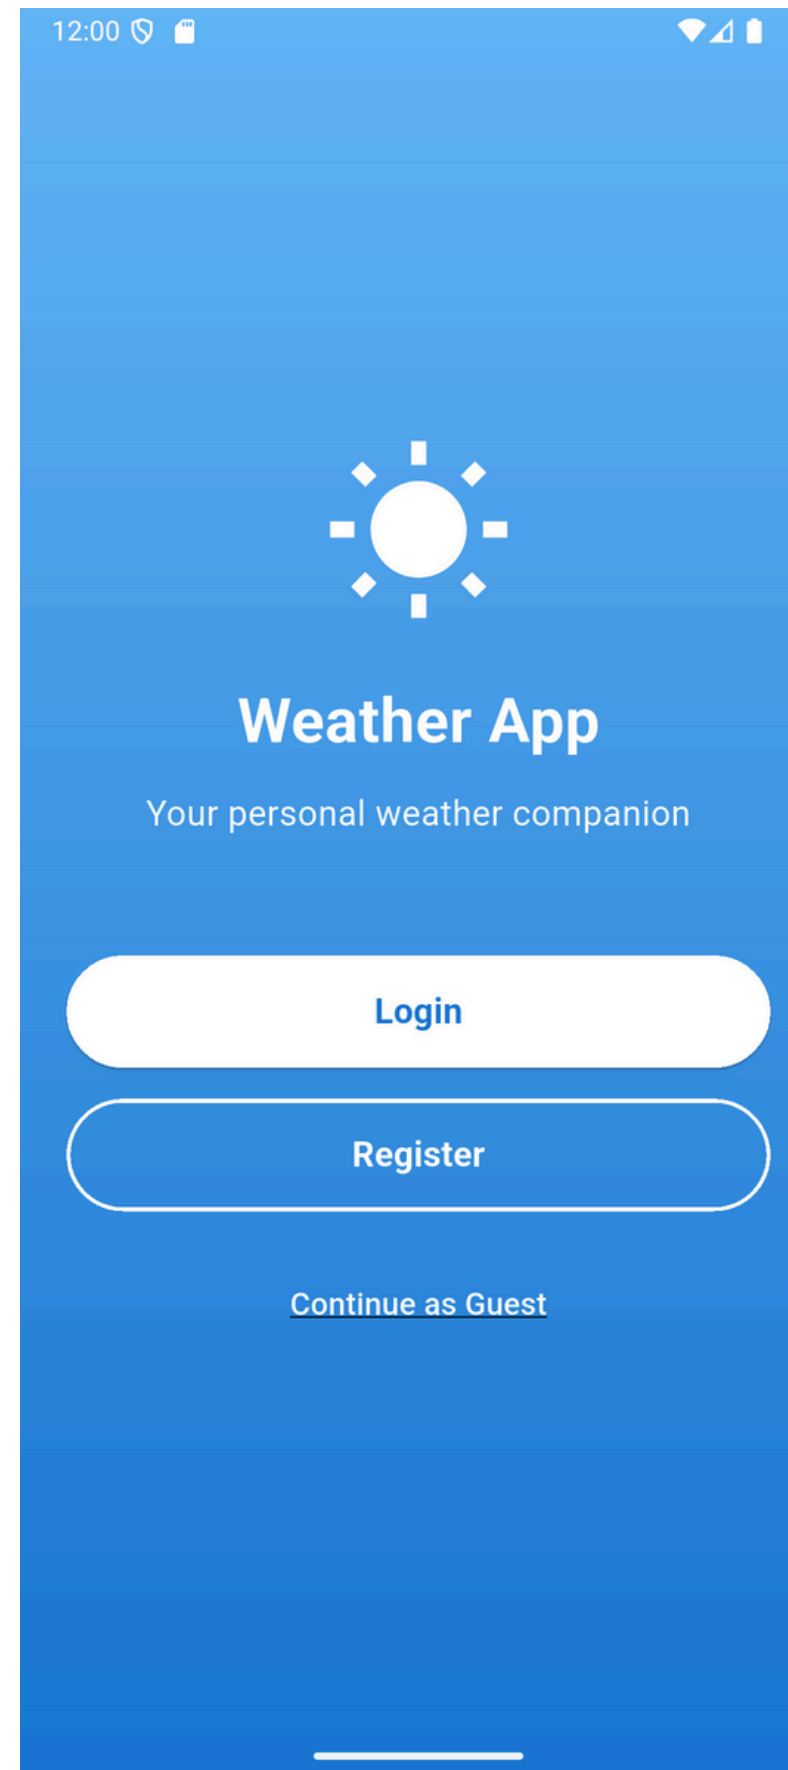

வானிலை 24x7

வாணிடை 24X7

Welcome Screen

Features:

- Sign-up and login using Firebase Authentication.
- Option to explore the app without logging in.(Guest Mode)
- Overview of core features.
- Visually engaging introduction to enhance user retention.

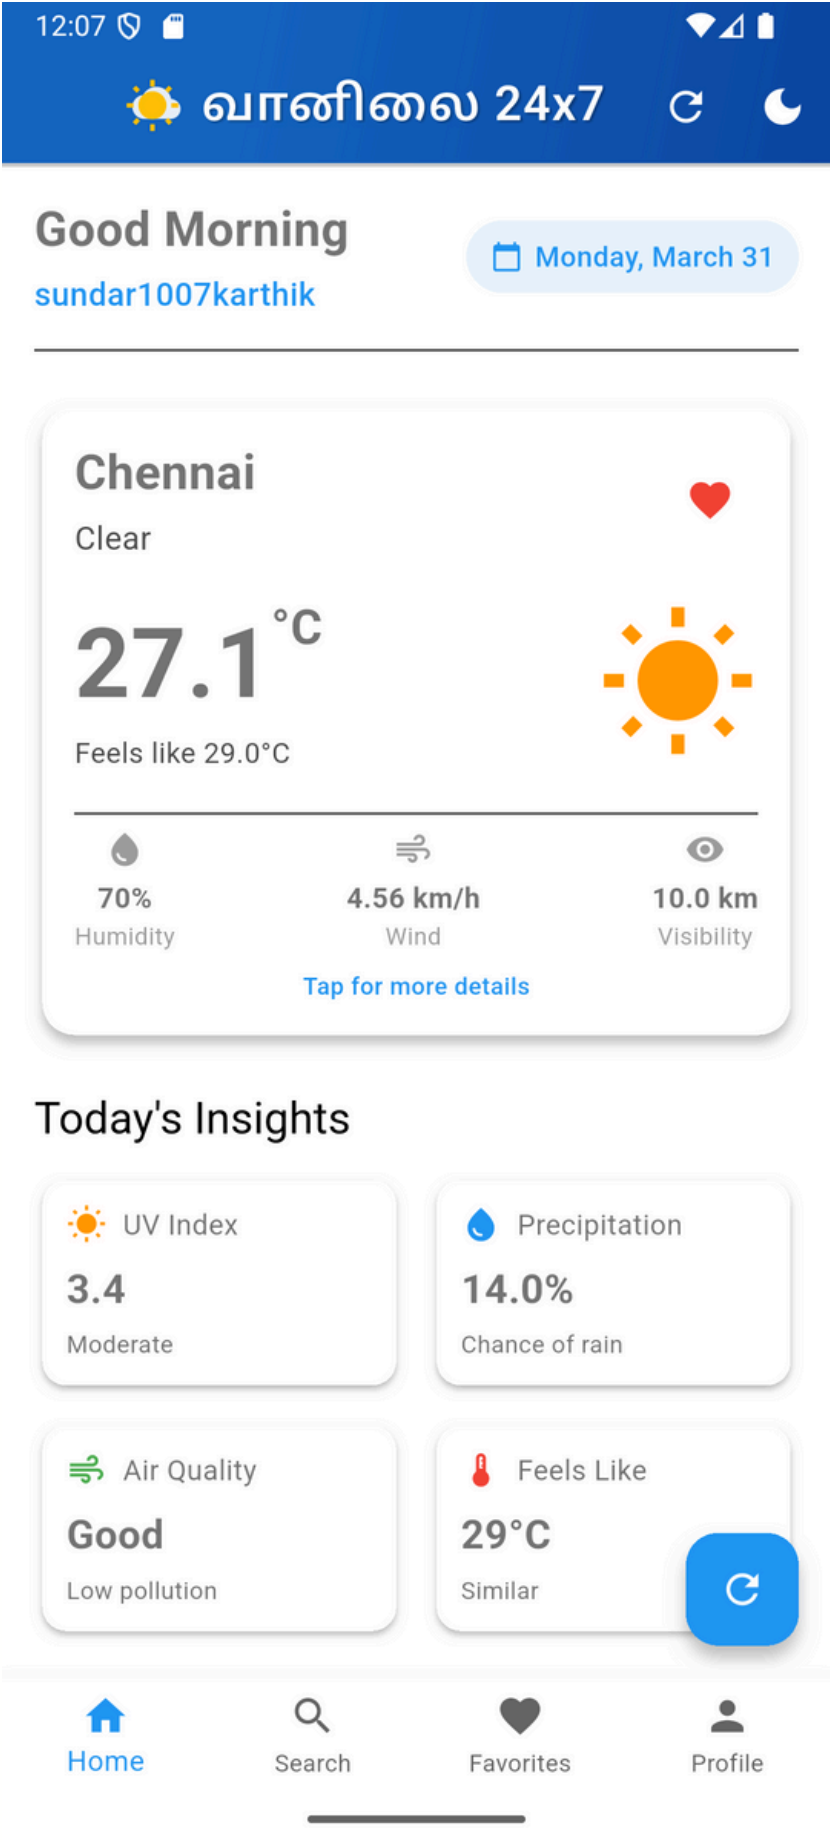

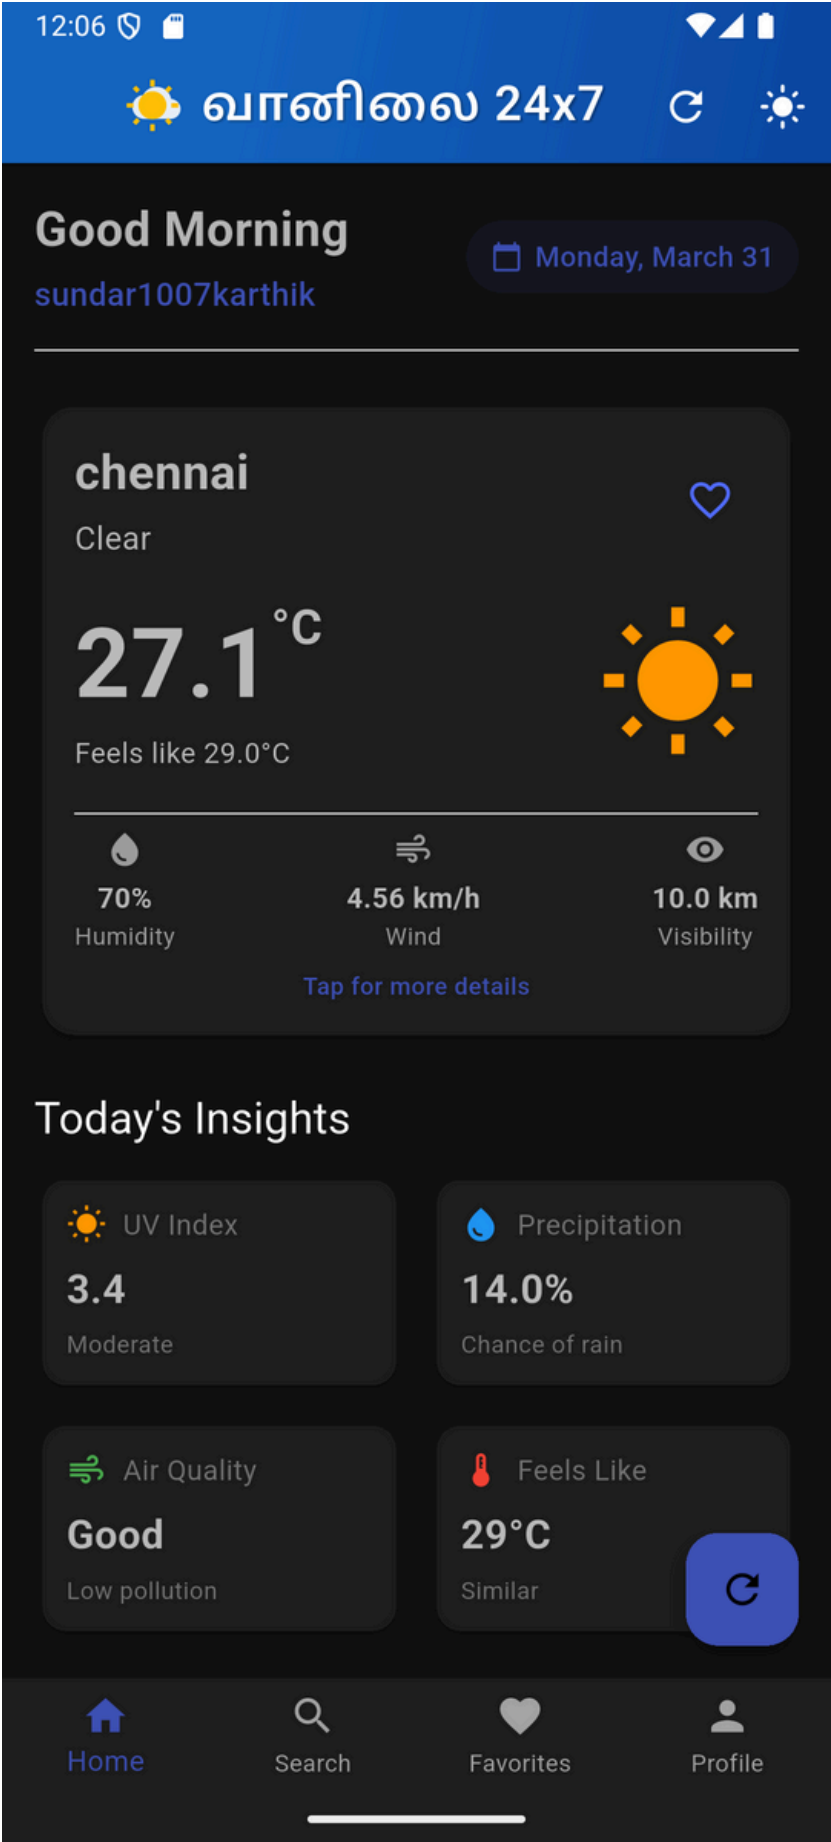

Welcome Screen

வானிலை 24x7

Home Screen

- Current location weather overview.
- Weather Insights Dashboard:
 - Temperature
 - Humidity
 - Wind Speed
 - Feels Like Temperature
 - Air Quality
 - Precipitation
- Quick access buttons for adding to favorites and changing settings.
- Scrollable forecast cards displaying hourly and 5-day weather data.

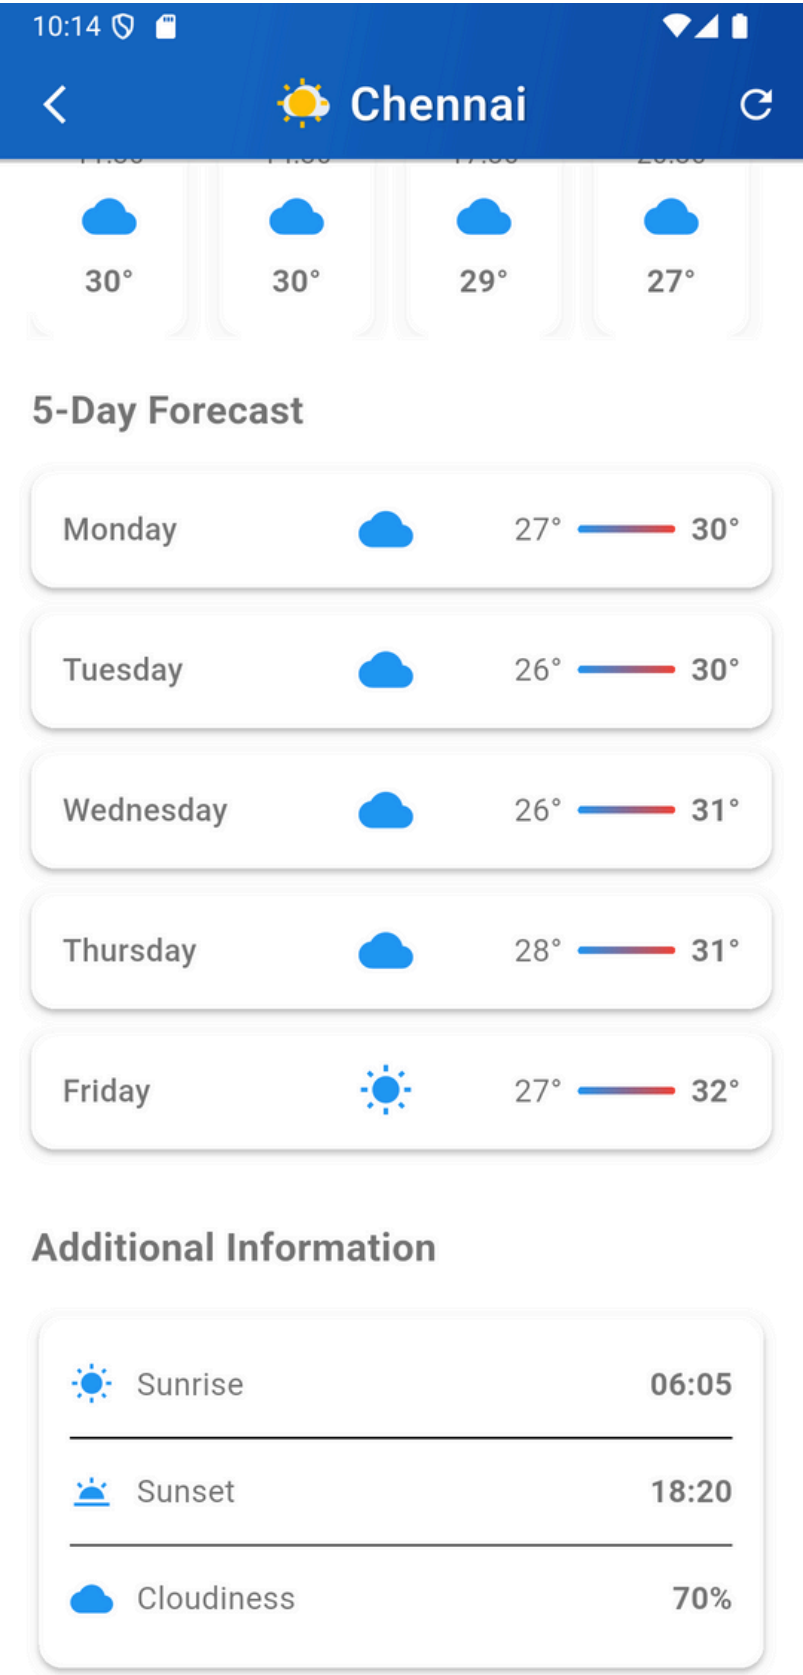

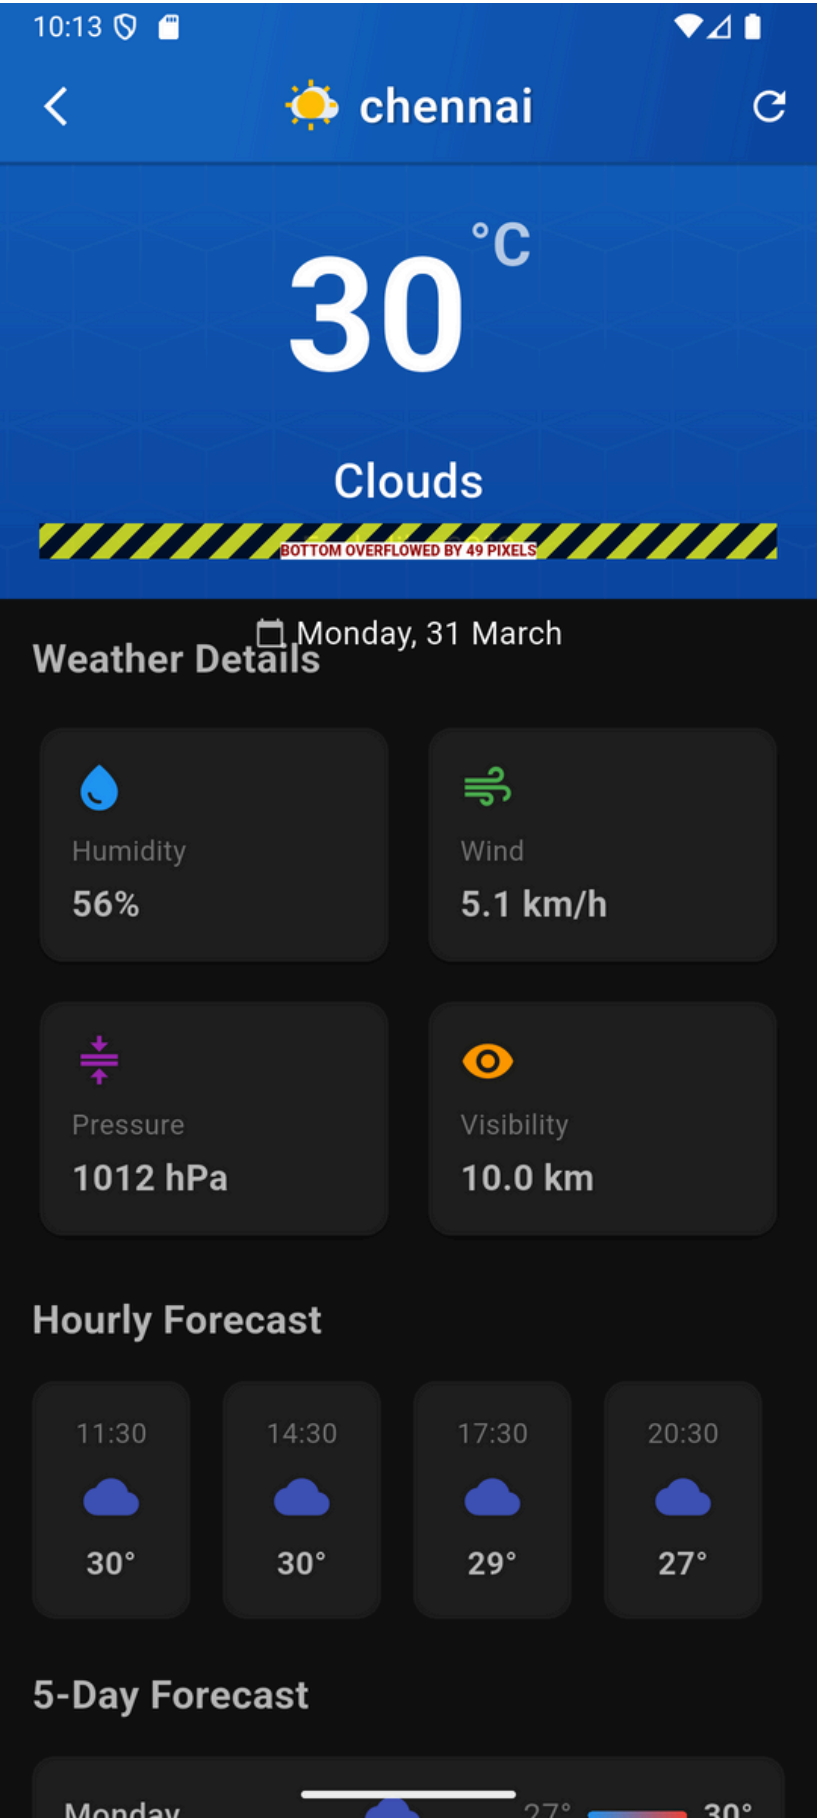

Home Screen

வாணிடை 24X7

City Details Screen

- Comprehensive weather information for a selected city.
- Gradient background that dynamically reflects current weather.
- Hourly and 5-day forecasts with min/max temperatures.
- Additional weather insights including:
 - Sunrise and sunset timings
 - Cloud cover and visibility
- Option to add/remove the city from favorites.

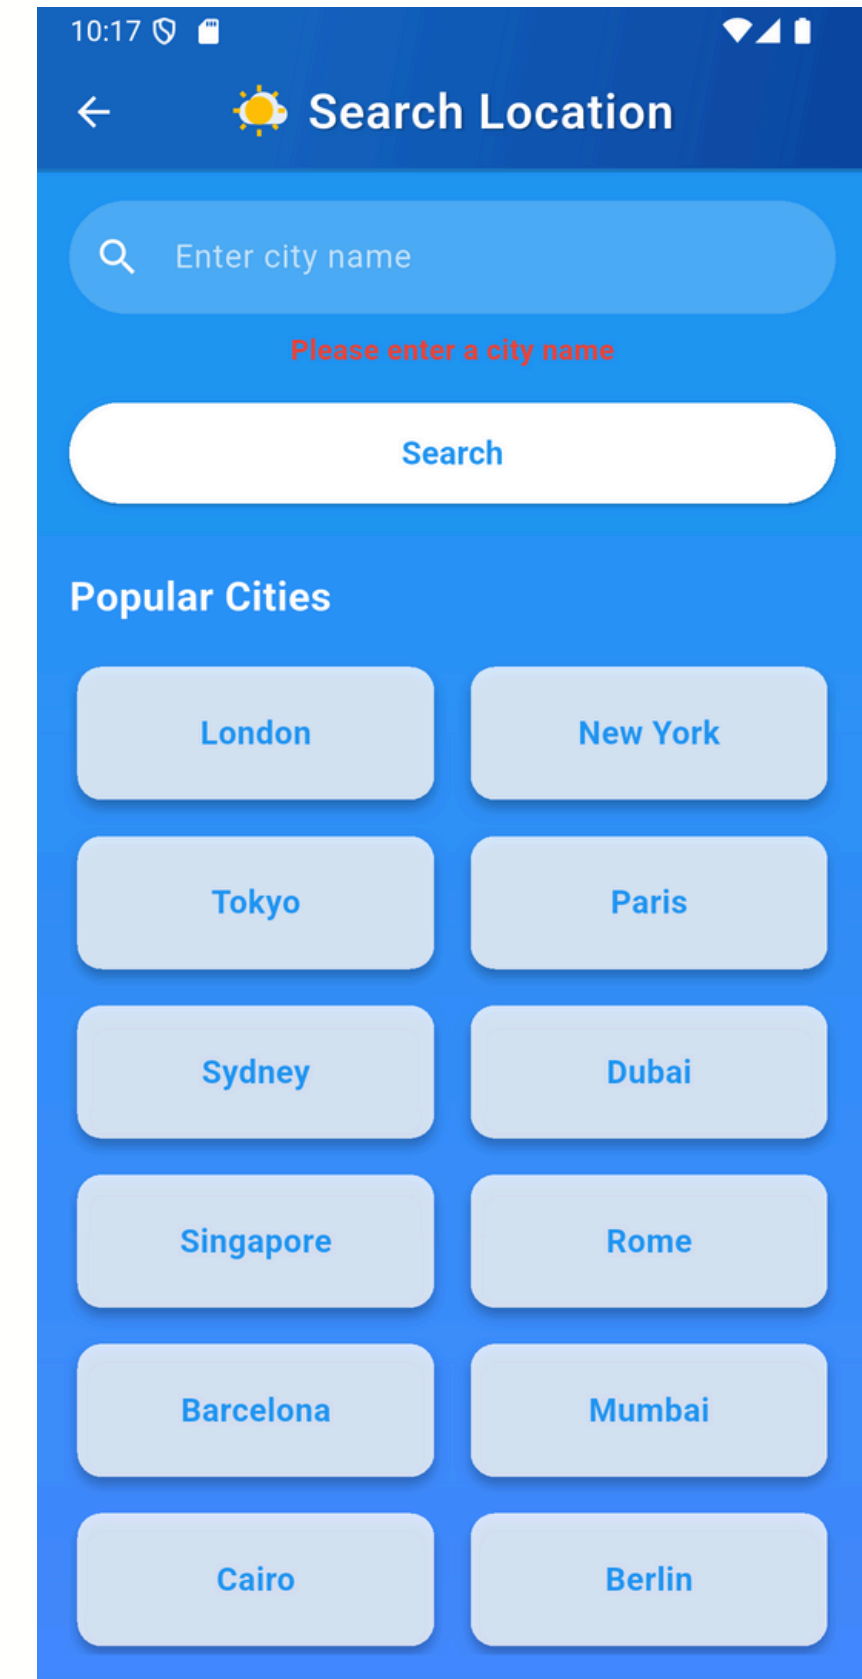

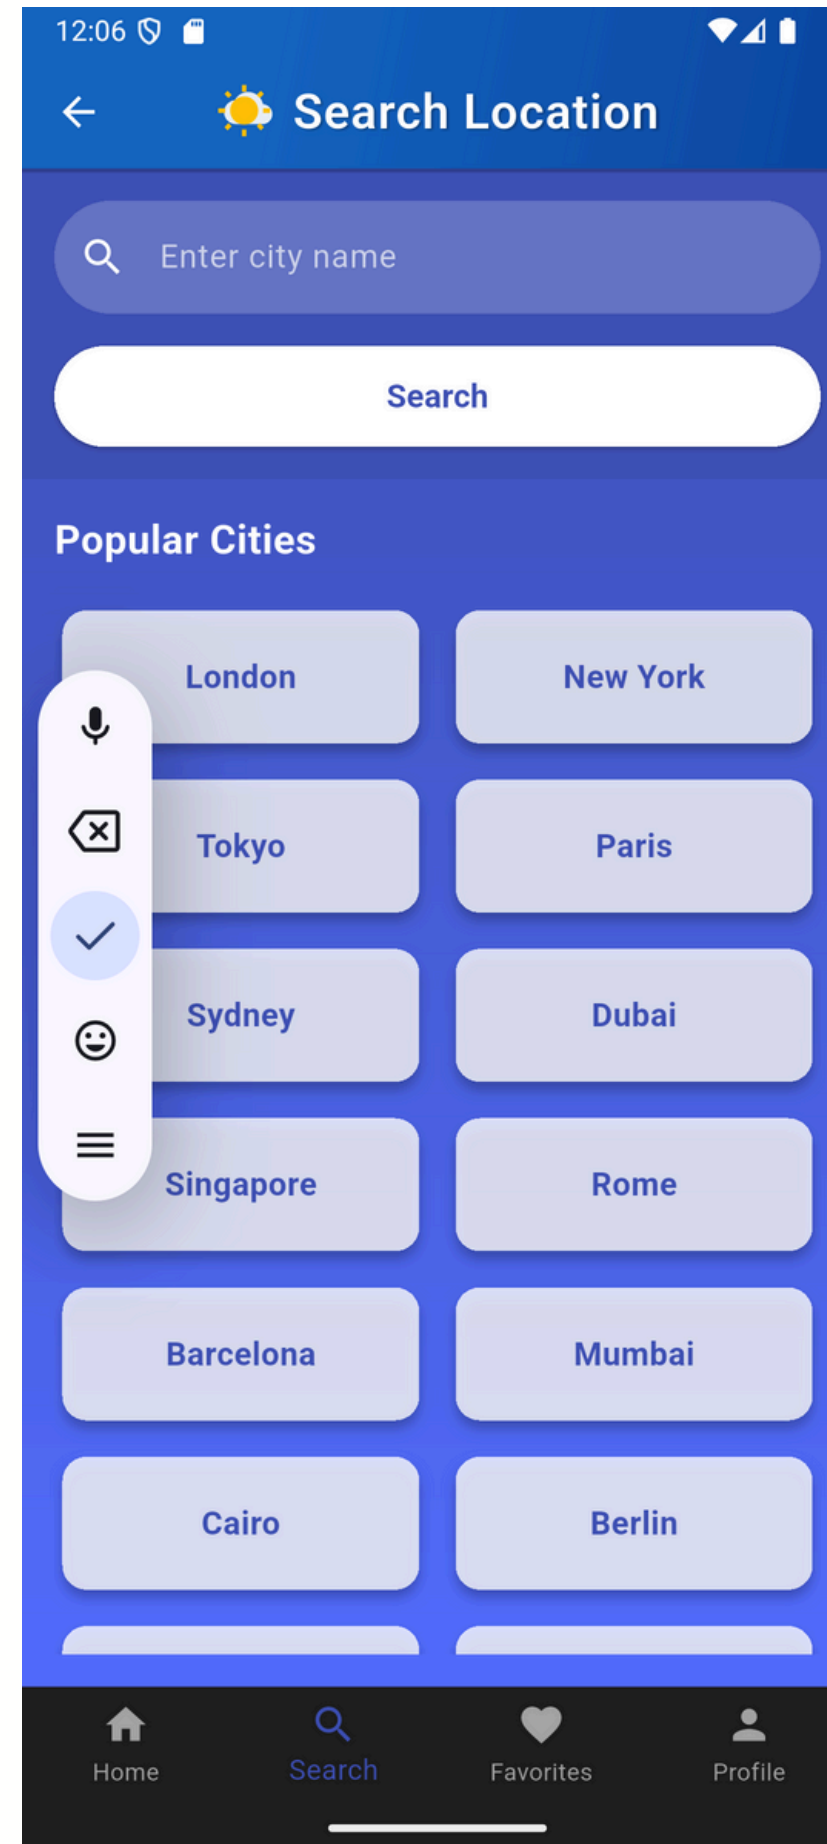

City Details Screen

வாணிடை 24X7

Search Screen

- Search bar with auto-complete functionality.
- Search global cities using a reliable API.
- Recent and trending searches displayed for convenience.
- Suggestions based on user preferences and seasonal trends.

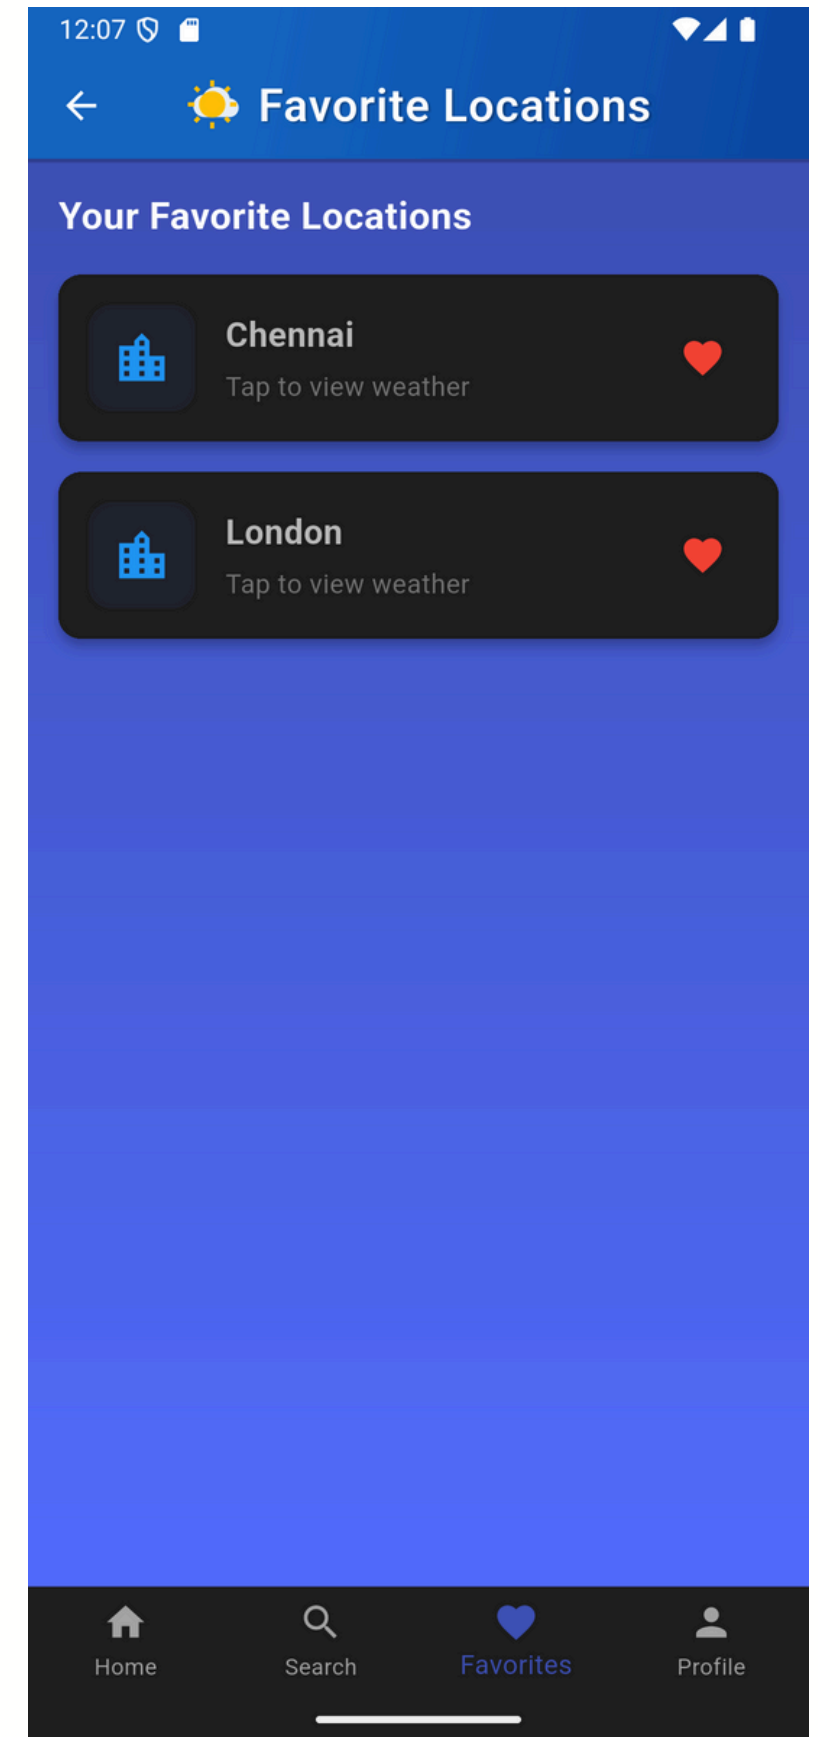

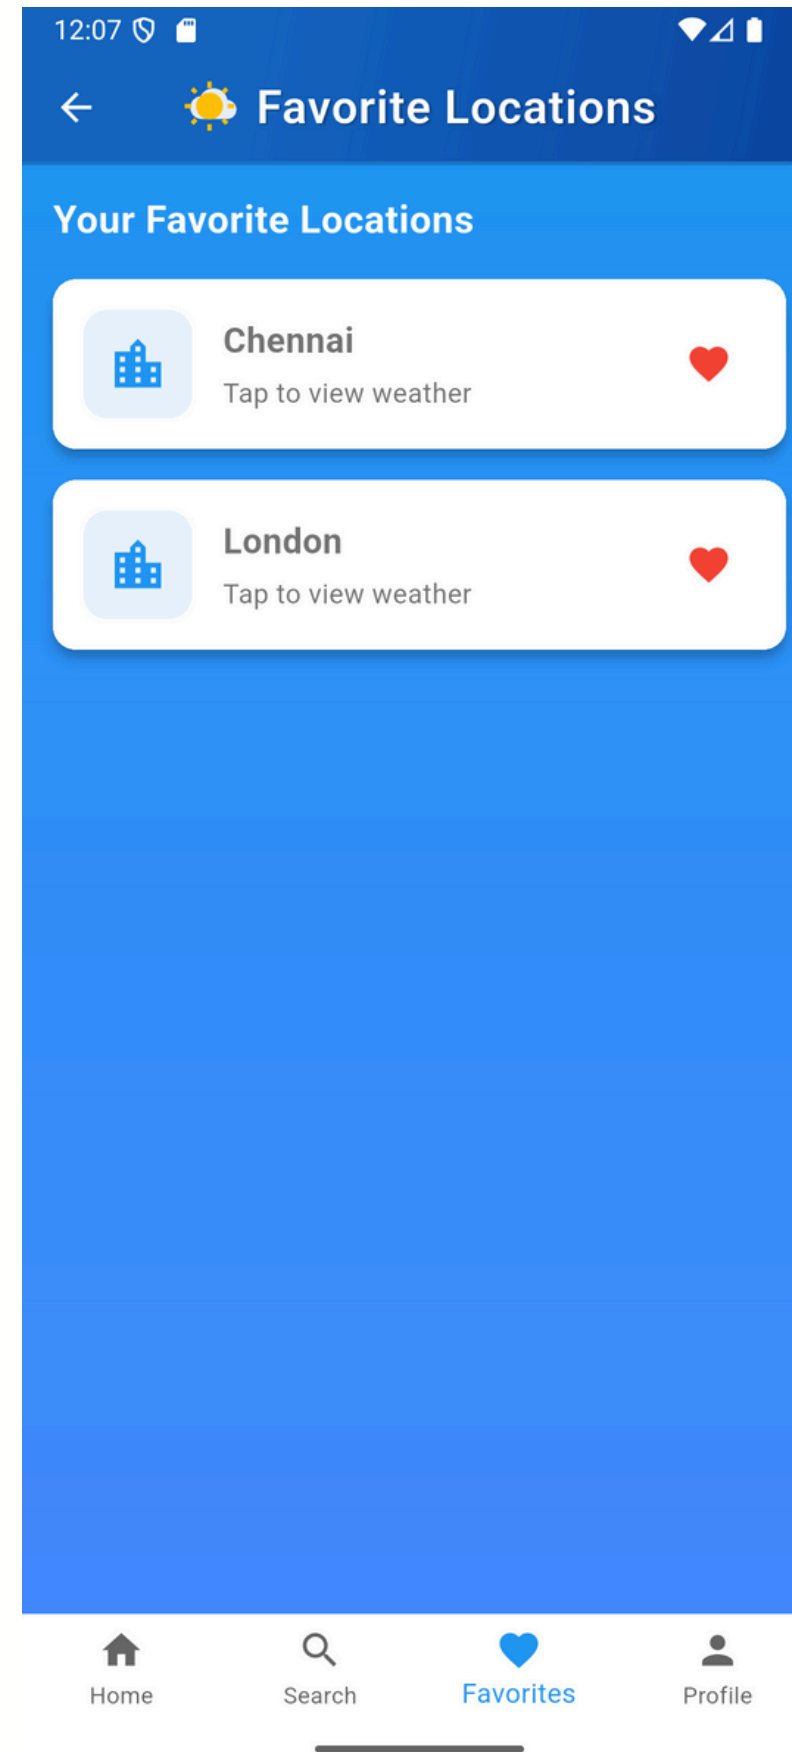

Search Screen

வாணிலை 24X7

Favorites Screen

- List of favorite locations with current conditions.
- Quick access to detailed city-specific weather reports.
- Option to reorder or remove favorites.

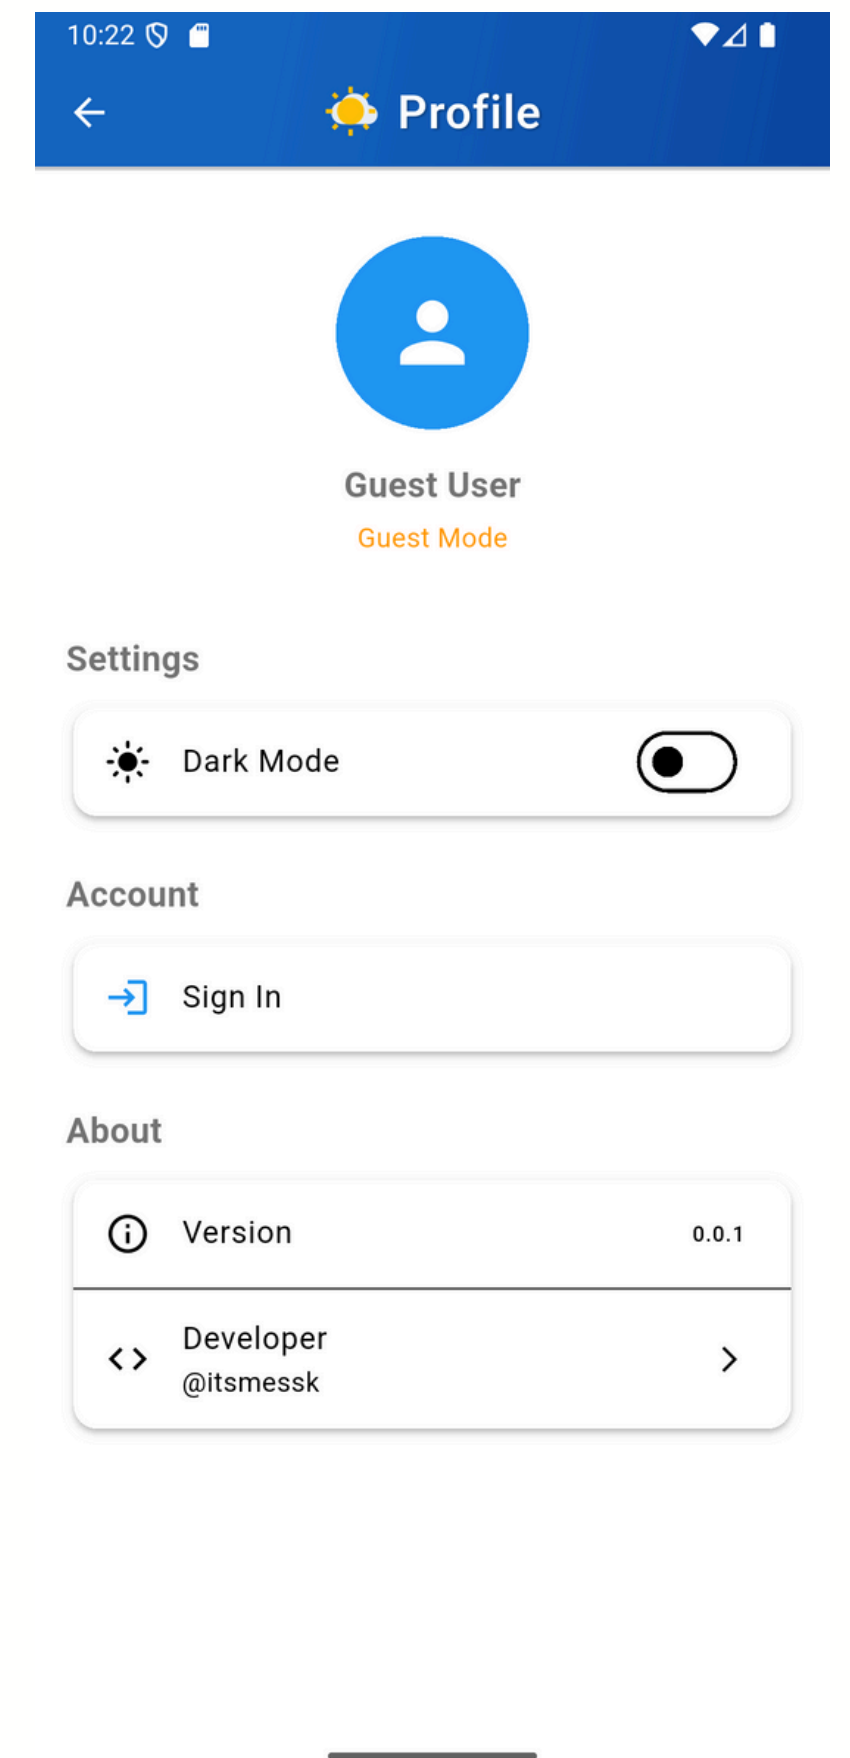

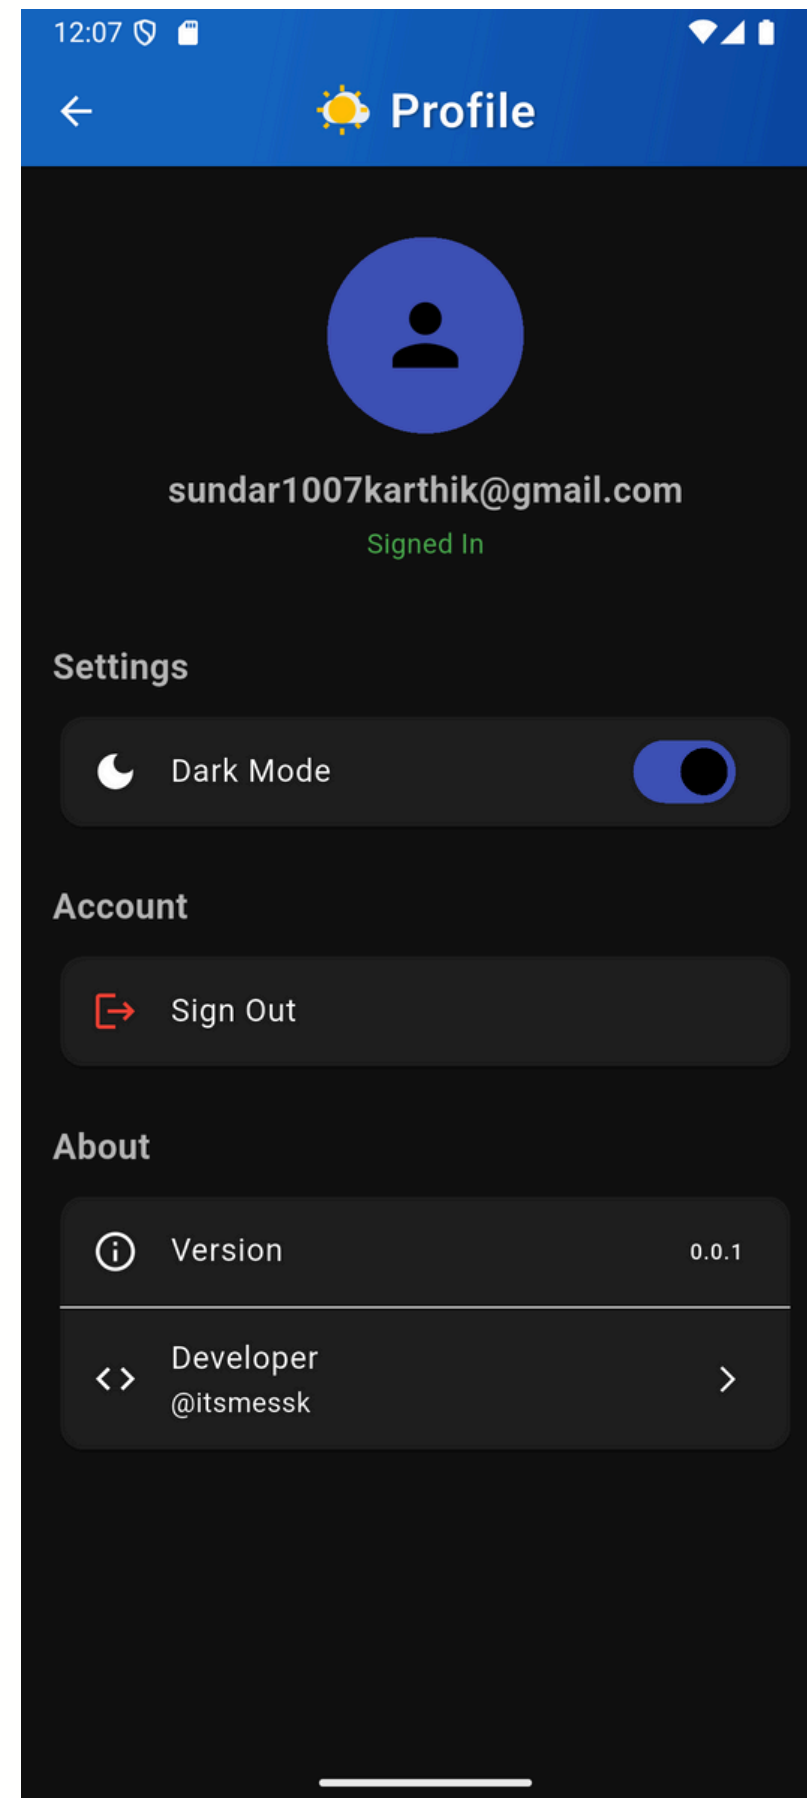

Favorites Screen

வாணிலை 24X7

Settings Screen

- User profile management.
- Theme toggle (light/dark mode).
- Unit configuration (temperature and wind speed).
- Default location preferences.
- Notification and alert settings.
- Account management options.

Settings Screen

Technical Implementation

வாணிடை 24x7

Architecture Overview

Frontend

- Developed using Flutter for cross-platform
- Utilizes Dart for efficient, modern app development.
- Provider Pattern used for state management.

Backend Services

- Green circle: Firebase Authentication for user authentication.
- Red circle: Firestore for storing user preferences and favorite locations.
- Red circle: RESTful API integration to fetch real-time weather data.

Data Handling

- Green circle: Weather data fetched through API requests.
- Red circle: Firestore for storing user preferences and favorite locations.
- Red circle: RESTful API integration to fetch real-time weather data.

வாணிடை 24x7

Backend API Integration

Weather API:
OpenWeatherMap

```
models > weather_model.dart > WeatherModel
class WeatherModel {
  WeatherModel({
    required this.windSpeed,
    required this.lastUpdated,
    this.date,
  });

  factory WeatherModel.fromJson(Map<String, dynamic> json) {
    return WeatherModel(
      cityName: json['location']['name'],
      country: json['location']['country'],
      temperature: json['current']['temp_c'].toDouble(),
      condition: json['current']['condition']['text'],
      conditionIcon: json['current']['condition']['icon'],
      feelsLike: json['current']['feelslike_c'].toDouble(),
      humidity: json['current']['humidity'],
      windSpeed: json['current']['wind_kph'].toDouble(),
      lastUpdated: DateTime.parse(json['current']['last_updated']),
    );
  }

  factory WeatherModel.fromForecastJson(Map<String, dynamic> json) {
    return WeatherModel(
      cityName: json['location']['name'],
      country: json['location']['country'],
      temperature: (json['current']['avgtemp_c'] ?? 0).toDouble(),
      condition: json['condition']['text'],
      conditionIcon: json['condition']['icon'],
      feelsLike: (json['current']['avgtemp_c'] ?? 0).toDouble(), //
      humidity: (json['current']['avghumidity'] ?? 0).toInt(),
      windSpeed: (json['current']['maxwind_kph'] ?? 0).toDouble(),
      lastUpdated: DateTime.now(),
      date: DateTime.parse(json['date']),
    ); // WeatherModel
  }
}
```

API Request Methods:

- GET /current – Fetch real-time weather data.
- GET /forecast/hourly – Retrieve hourly forecast.
- GET /forecast/daily – Get 5-day forecast.

Response Handling:

- JSON data parsed and mapped to UI.
- API error handling with appropriate fallback mechanisms.

Firebase Integration

Authentication

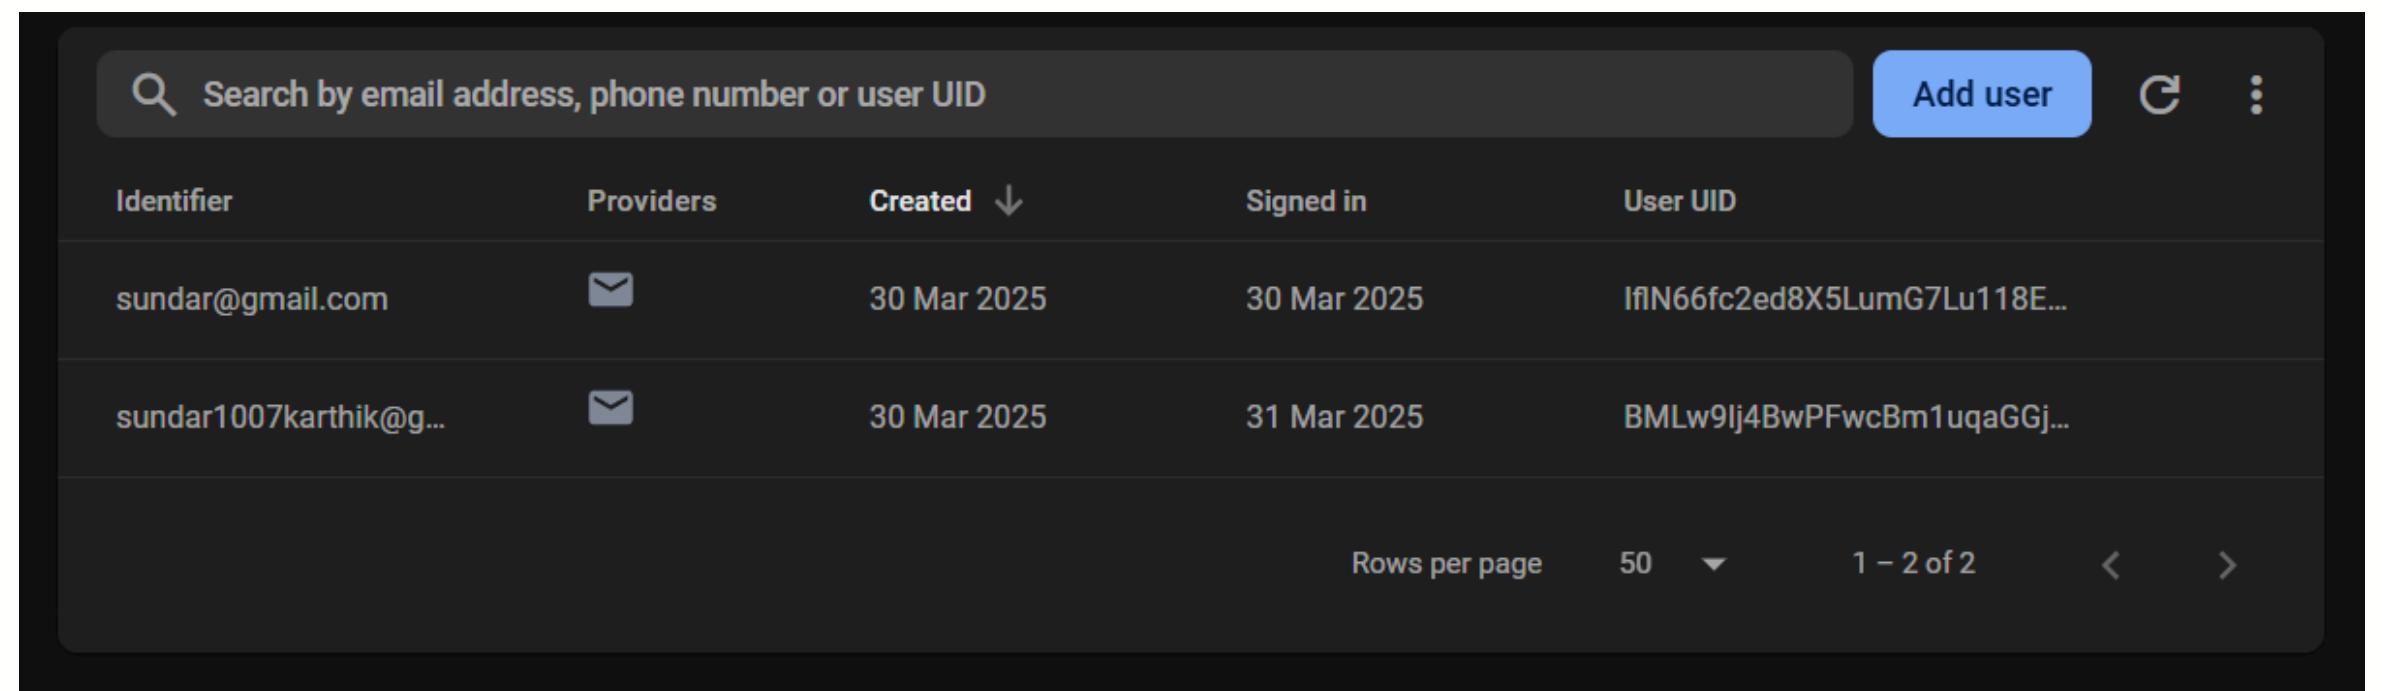

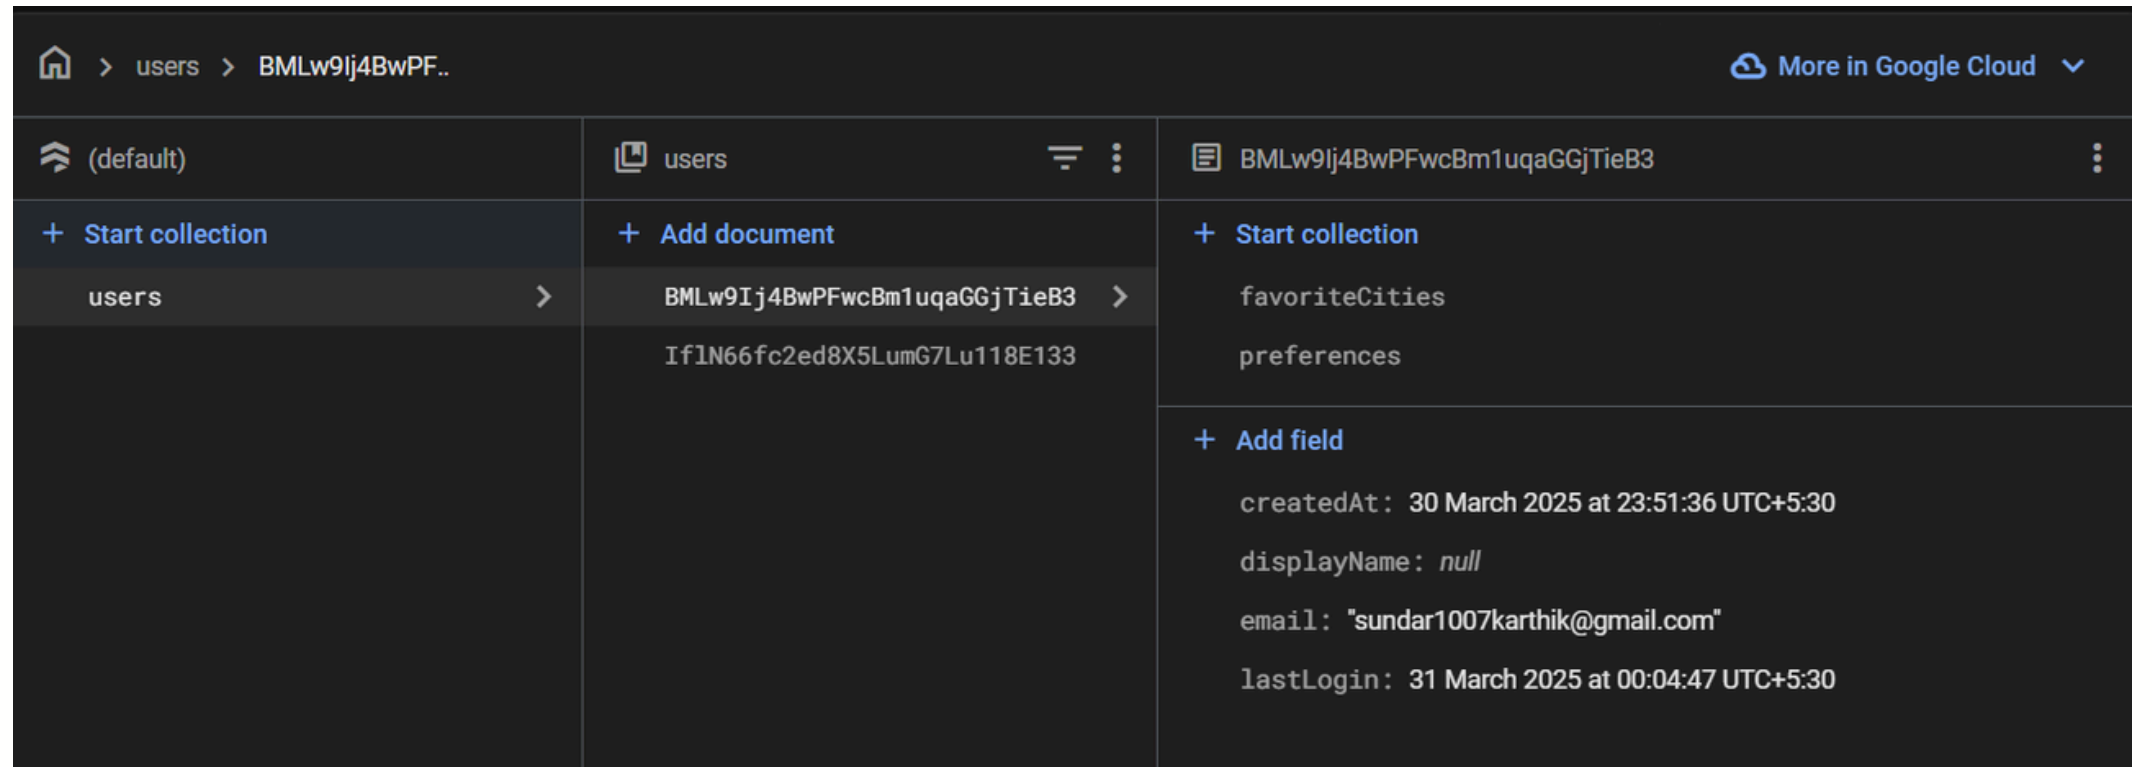

- Email/Password and Google Sign-in supported.
- Token-based authentication for secure access.

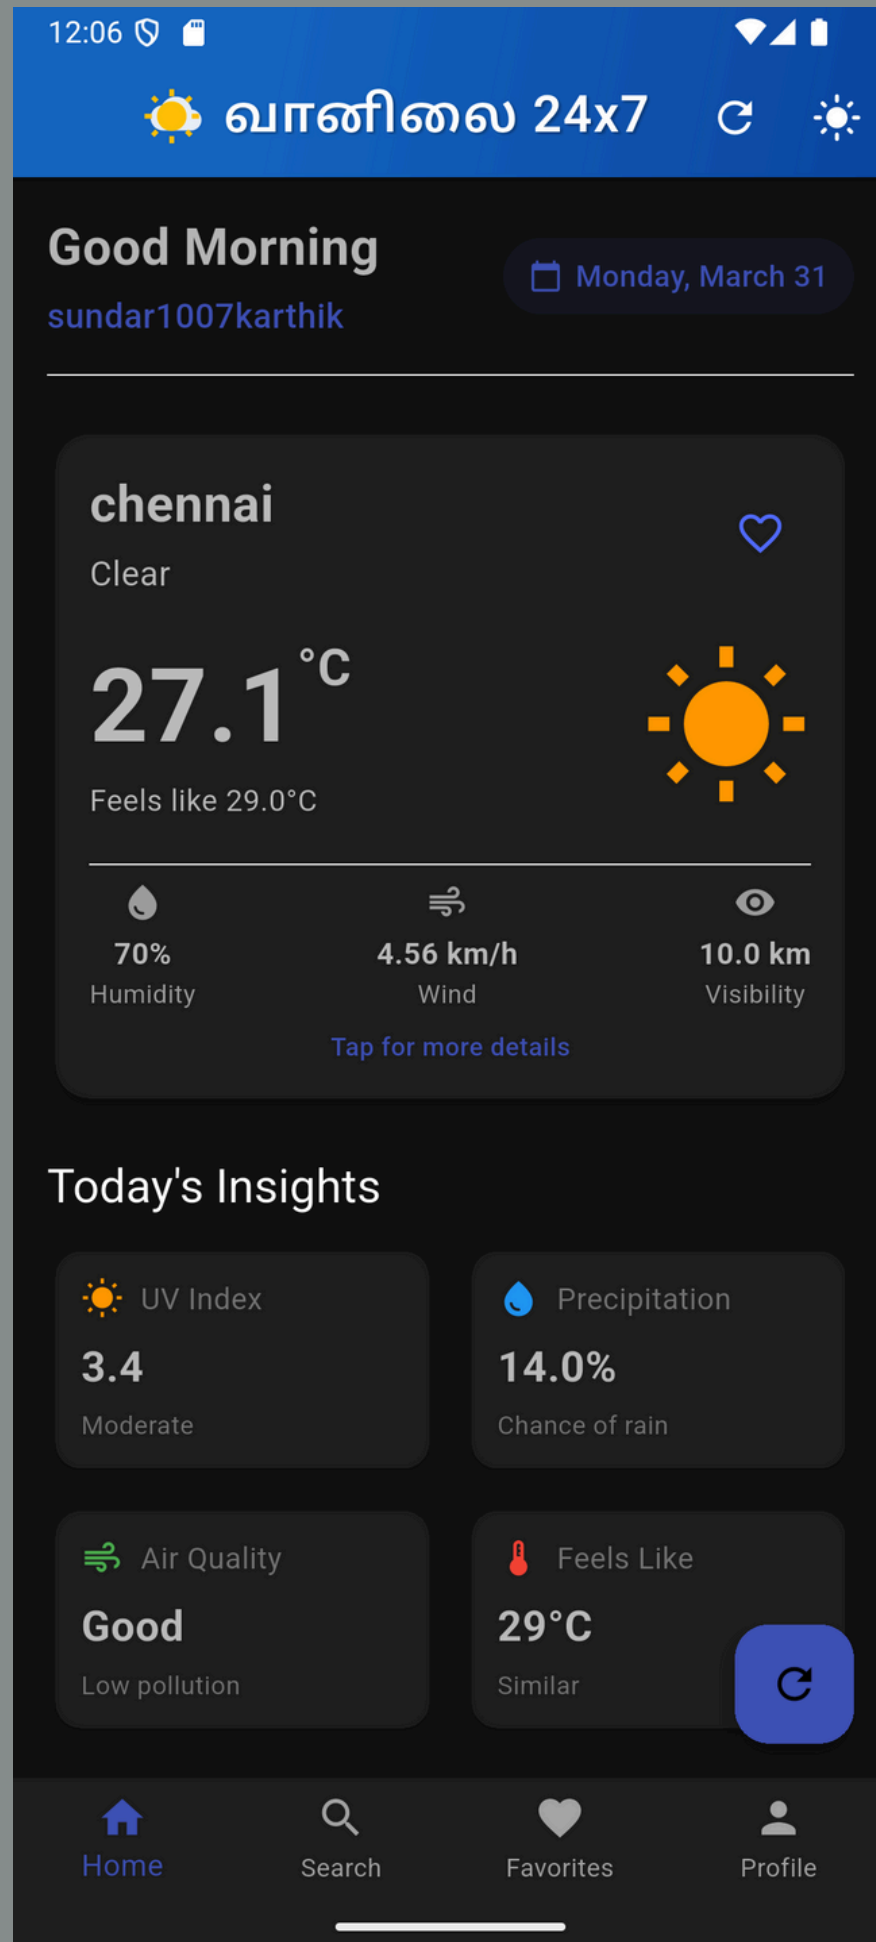

Firestore Database:

- User preferences stored in users collection.
- Favorite locations stored in a separate favorites document.

Security Rules:

- Restricted read/write operations based on authenticated user access.
- Rules ensure only authorized users access personal data.

User-Centric Design

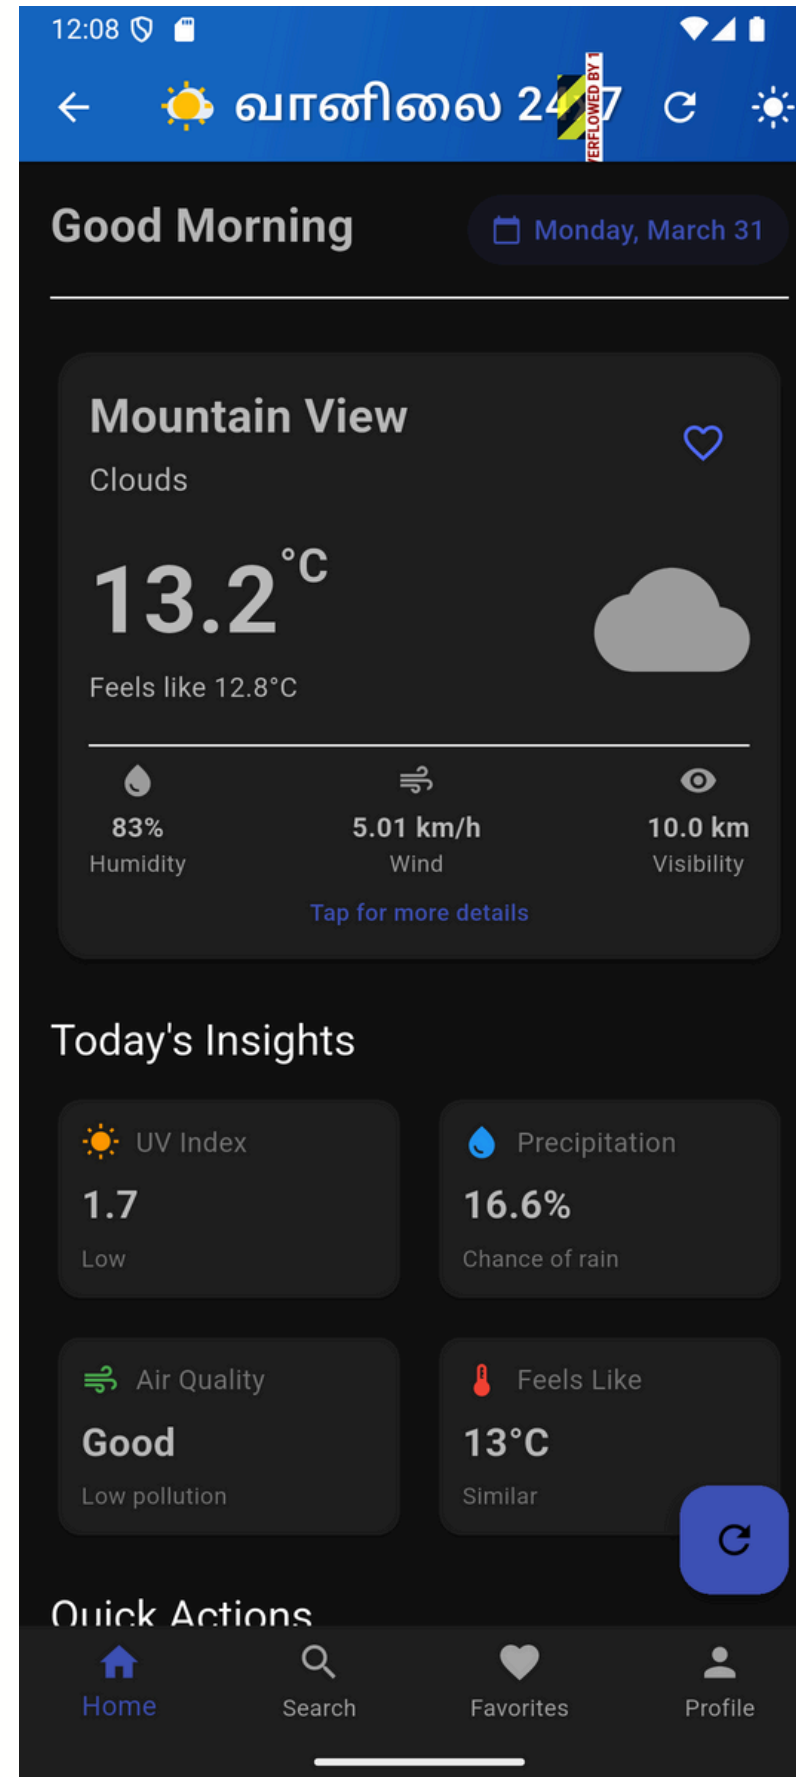

User-Centric Design

வானிலை 24x7

User-Centric Design

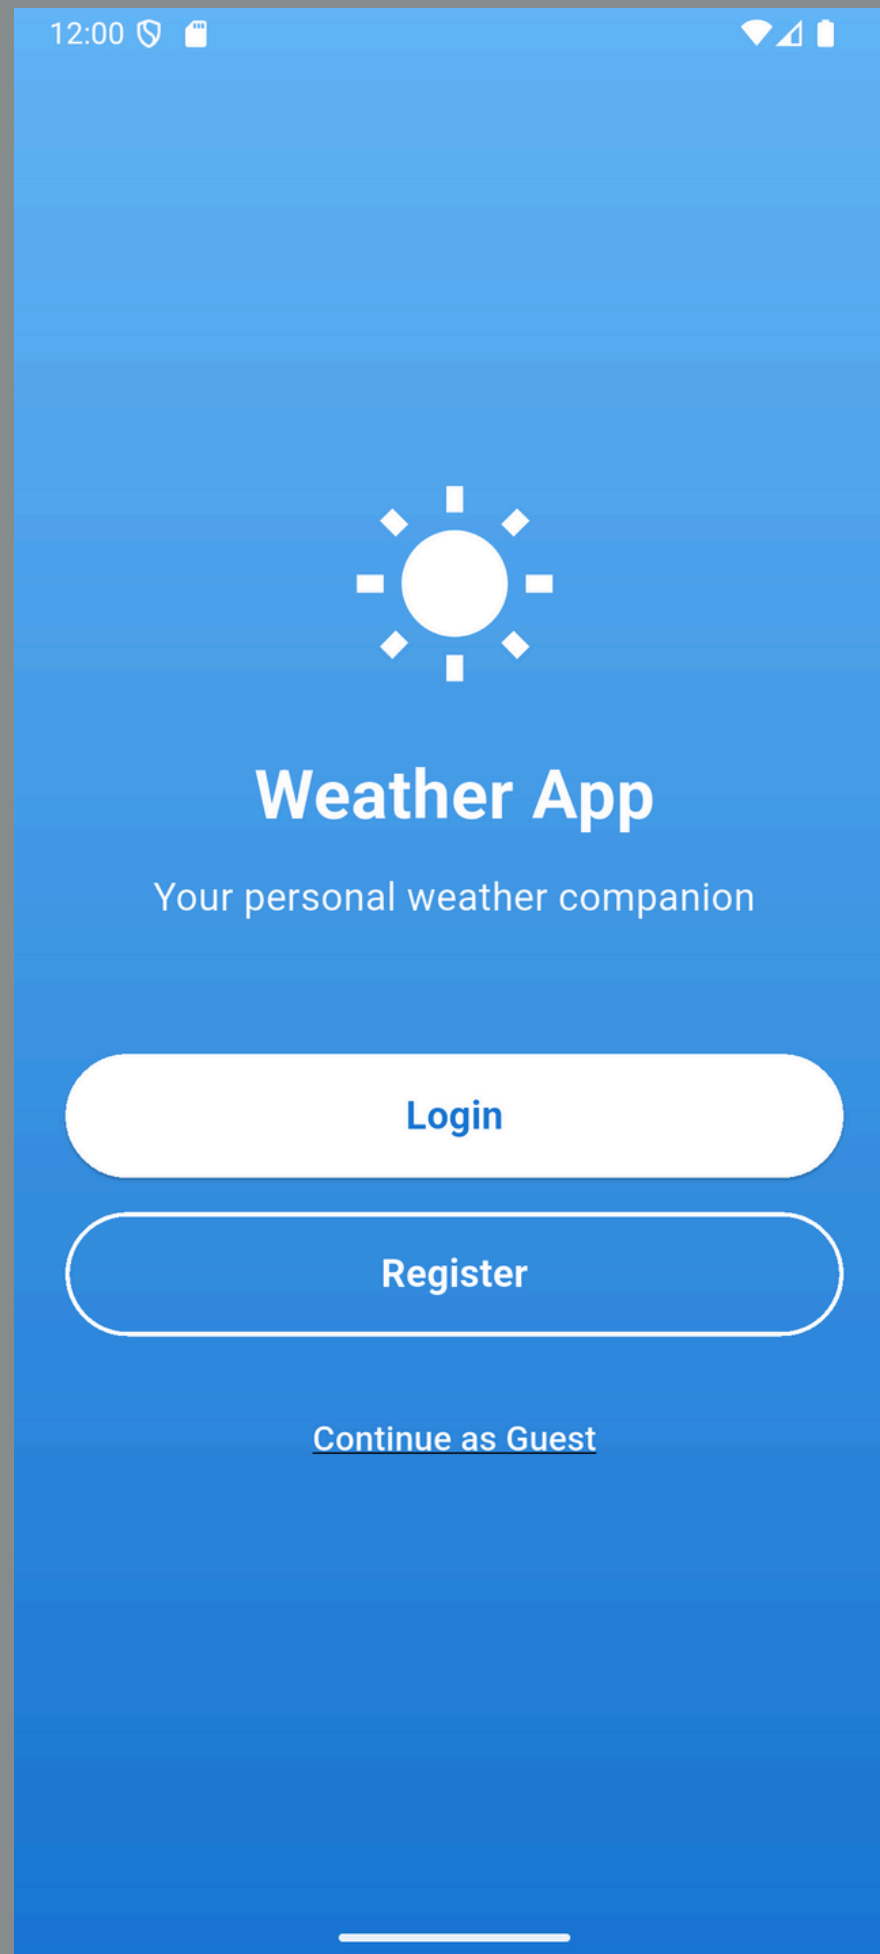

UI/UX Principles

- Simplicity: Clean layout minimizing user learning curve.
- Visual Hierarchy: Emphasis on critical weather insights.
- Consistency: Uniform design across screens.
- Accessibility: Inclusive design with high contrast and readable fonts.

Design Elements

- Icons: Customized weather icons reflecting real-time conditions.
- Animations: Smooth transitions between screens.
- Responsive Layout: Adapts to mobile, tablet, and web devices.
- Color Scheme: Weather-dependent gradient backgrounds.
- Typography: Legible fonts optimized for both light and dark themes.

Conclusion

Recap of Key Features and Benefits

வாணிலை 24X7

- Accurate real-time weather updates with detailed insights.
- Personalized experience with user preferences and favorites.
- Clean, modern interface ensuring intuitive navigation.
- Cloud-based data storage and synchronization.
- Offline support for seamless user experience.

Conclusion
